OMAHA OPTICAL COMPANY

FACTORY---AMERICAN OPTICAL CO.

To The Trade:---

For your kind consideration we present the last edition of our Catalogue—what we believe to be a complete reference book for all Optical requirements. Special attention has been given to classification and arrangement, so that items may be referred to with ease. Prices have been revised, and are as low as is consistent with good quality. Our patrons will at all times receive the benefit of any reductions on prices, and we reserve the right to make any advances that conditions may require.

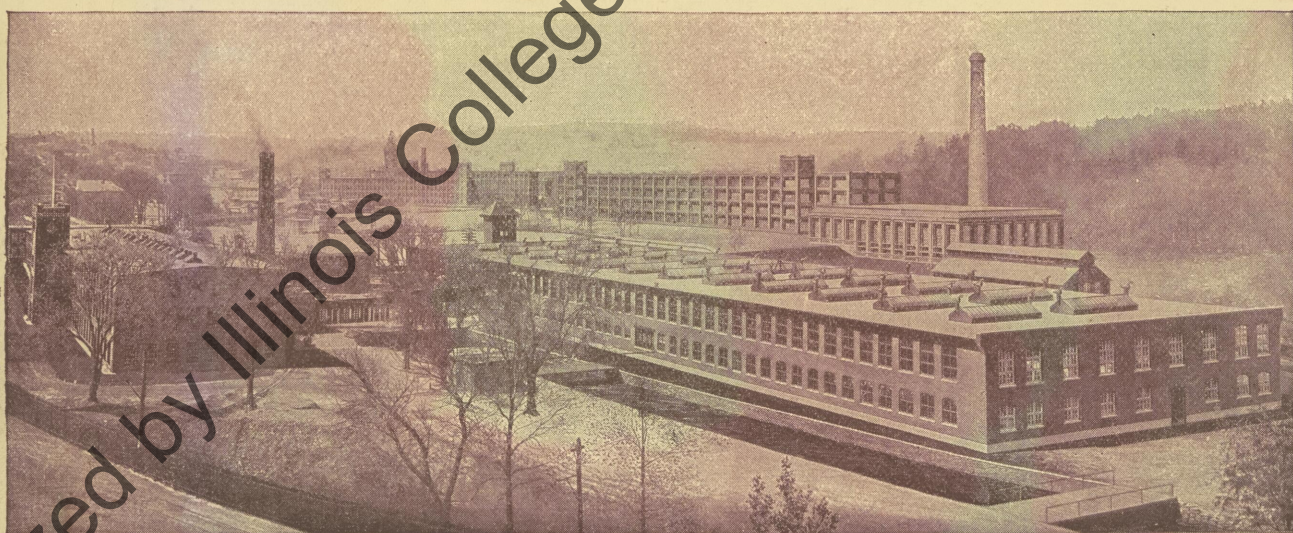

We are Western Distributors of the product of the American Optical Company and have in stock a complete line of their Optical Wares which are the recognized standard of the world.

If it's Optical, we have it and can serve you without any long delays. Our business is strictly wholesale. "Positively no goods sold or Prescriptions filled at retail, either direct or by Agent" is a policy carefully observed.

We desire to express sincere gratitude to those customers whose patronage and influence has helped us on the way to our present degree of prosperity.

To those who have never dealt with us, let this be an invitation for a trial order with the assurance that every possible effort will be made to please. Respectfully,

OMAHA OPTICAL COMPANY—*"The House of Progress,"*

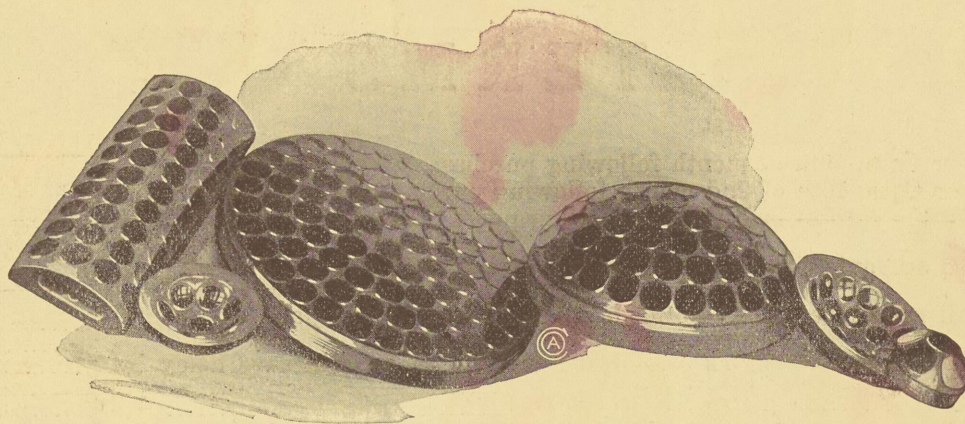

TERMS

Terms.	For Cash, 10th of month following purchase, 6% discount. For Cash, 10th of 2nd month following purchase, 3% discount. On the 10th of 3rd month following purchase, Net Cash, no discount.
Sight Draft.	All accounts not settled at maturity are subject to draft at sight.
Remittance.	All remittances must be made in funds bankable at par.
References.	Dealers not having an established credit with us, will save delay by giving references with their order.
C. O. D. Orders.	When requested we send goods by express C. O. D.; such orders must be accompanied with a sufficient amount to cover Express charges. We allow Express charges for return of money when bills amount to ten (10.00) dollars or more.
First-class Mail.	Unless otherwise instructed, all Prescription work will be sent as first-class mail, securely sealed, or by Express, when value exceeds ten (10.00) dollars.
Customers' Risk.	Goods sent by mail, not insured, are at customer's risk.
Insurance.	Rate for Insurance on mail packages, one cent for each dollar value.
Direct to Patient.	When instructed to send Prescription Glasses direct to patient, we send by insured mail in all cases.
Registered Mail.	Packages sent by Registered Mail cost ten cents extra, and are usually delayed in transportation one day.
Artificial Eyes.	Selections of Artificial Eyes will be sent upon request. They are sent upon memorandum, and must be returned to us, charges prepaid, within ten days' time.
Receipts.	Except upon special request, we have discontinued sending receipts for remittances, other than currency. We have followed the lead of other commercial houses in this respect. Drafts, Checks, and Money Orders are a matter of record, and therefore evidence, should there be any loss or error.

STOCK ORDERS

Frames and Mountings.	Orders for Single Frames or Mountings , when dimensions are given, will be billed at Prescription Prices . Orders for Single Frames or Mountings without Special Dimensions (value less than \$10.00 per dozen), will be charged at 1-10th the dozen price, and when value exceeds \$10.00, at 1-12th the dozen price + 10 cents each. Eye Glass Frames and Mountings are carried in regular stock with Springs of the following dimensions: Oblong Shape , 2 $\frac{3}{8}$ inches; Hoop Shape , 2 inches; Adjustable Shape , 2 inches, and Guards with kinds of facing and Studs as Illustrated. For Frames or Mountings other than above, an additional charge will be made for Assembling.
Uncut Lenses	Spherical, Cylinder and Sphero-Cylinder Lenses ordered in not less than 3 dozen pair lots and $\frac{1}{2}$ dozen pair of a focus and kind charged at gross prices. Lenses ordered in quantities of $\frac{1}{2}$ dozen pairs of a kind of each division of a focus will be charged at the dozen prices. Lenses ordered in quantities of $\frac{1}{4}$ to $\frac{1}{2}$ dozen pairs assorted foci of a kind, charged at 1-10th of the dozen price per pair. Lenses ordered in quantities less than $\frac{1}{4}$ dozen pairs, charged at Beveled Edge Prescription Prices , less 25 per cent discount.
Edged Lenses	Gross Prices apply to Orders of $\frac{1}{2}$ dozen pairs of a Focus , in $\frac{1}{2}$ gross quantities or single dozens of a Focus . Dozen prices apply to orders of not less than $\frac{1}{2}$ dozen pairs of a kind (Assorted Focus). Lenses ordered in quantities of $\frac{1}{4}$ to $\frac{1}{2}$ dozen pairs assorted foci of a kind charged at 1-10th of the dozen price per pair. Lenses ordered in quantities of less than $\frac{1}{4}$ dozen pairs charged at Prescription Prices .

OMAHA OPTICAL COMPANY

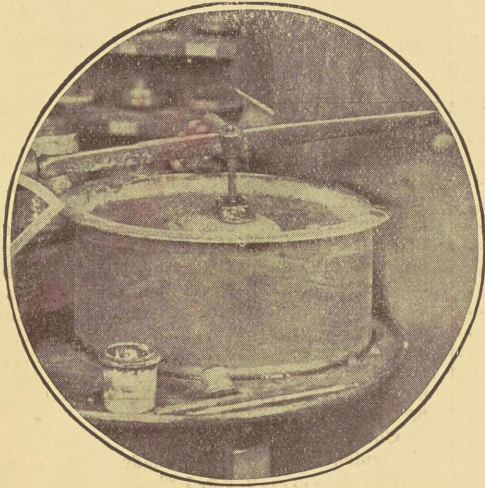

The above illustration will demonstrate why lenses of strong curvature cost more than those with weak curves, also why cylindrical lenses are more expensive than spherical. The stronger the curves the less number the laps will hold at one time and therefore the added cost of production. The number ranges from 5 to 120 on each tool, according to kind and curvature.

IMPORTANT SUGGESTIONS

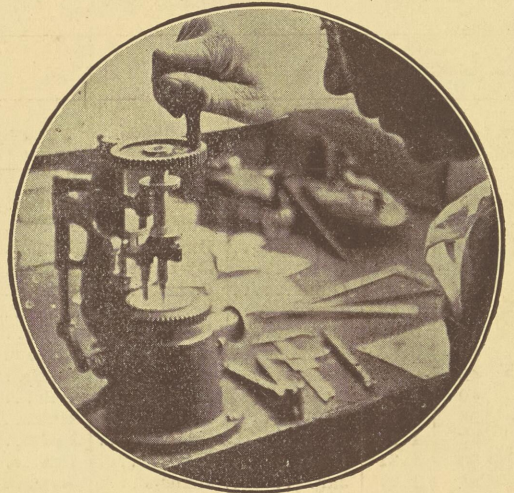

When writing Prescription Orders, remember that they must be read and understood before the Order can be filled. In all cases be explicit. The Order must pass through at least a dozen hands before it is completed. Therefore each detail should be fully explained. Remember, that the Prescription Blank must convey to us all your requirements. The following suggestions may avoid delays and disappointments.

- Names, Dates.** Write plainly all Names, Dates, Figures and Signs, avoiding abbreviations suggesting any possibility for "guess work."
- Catalogue Number.** When possible give Catalogue Number. This is better than a complete description of the article, and conveys to us exactly what is required, without any element of doubt.
- Prescription Blanks.** Always use a separate Prescription Blank for each pair of Lenses or Glasses, or repair job, and write nothing upon a Prescription Blank not pertaining to the Glasses ordered upon it.
- Number.** Prescription Blanks should be numbered consecutively, for convenience in filing, and for reference in case correspondence is necessary.
- Envelopes, Labels.** We furnish Prescription Books, addressed Envelopes, and gummed addressed Labels free of charge. We will also furnish a rubber stamp, with our name and address, upon request.
- Tags for Jobs.** When sending repair jobs they should be plainly tagged with the patient's name, or the number of the Prescription. We furnish tags free of charge for this purpose.
- Glasses Complete.** On account of the great variety of shapes, sizes and thicknesses of Lenses, holes being drilled at different points, etc., all Glasses needing repairs, or changing of Lenses, should be forwarded to us complete.
- Samples by Mail.** Sample Frames and Lenses should never be inclosed in a letter, as they are thus broken in the mails.
- Direct Jobs Insured.** If Glasses are to be sent direct to patient, the Order should so state in space left for the purpose. Direct Jobs are sent forward by Registered Mail when so ordered, otherwise they are always sent by Regular Mail, insured, for which the charge is one cent for each dollar value or fraction thereof.
- Interchangeable Lenses.** Interchangeable Lenses cannot be ground accurately to size according to diagram or drawing. They are ground to fit standard eye sizes and must be ordered as I-O-OO Eye size, etc., or the Frame to be used must be sent in with Order.

For Tonic Lenses +3.00 Base, Add Word "Tonic" to Code.

For Tonic Lenses +6.00 Base, Add Word "Toriscus" to Code.

For Tonic Lenses +8.00 Base, Add Word "Torisco" to Code.

For Tonic Lenses -3.00 Base, Add Word "Torto" to Code.

For Tonic Lenses -6.00 Base, Add Word "Tortisco" to Code.

DIRECTIONS FOR USE OF CODE

Take the word that is on a line with number or article desired, and in the column headed by the kind of lenses. Always give order for right eye first and for left eye next, thus:

Punch—Incite—Eye—Mud—Gait—Howard—Celery—Shad—Maple—Pink—Beetle—Ivy.

Would mean: R. E. +3.00—+1.25 Cyl., Axis 95°. L. E. +2.25—+1.00 Cyl., Axis 140°; in 1 eye, 14 K. light riding frame, saddle nose, 2% pupillary distance, nose N1.

*When base of prism is downward, prefix word Apex to code word for meridian.

If two lenses, right and left, are desired, specify Right and Left on telegram.

The Adjustment of Spectacles

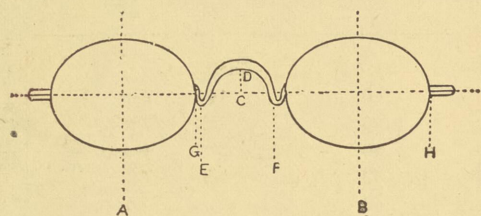

FIG. I

eye, plus the width of bridge, therefore the distance from A to B in Fig. I, equals the distance from G to H.

Height of Bridge is measured from a line drawn through the horizontal center of frame (bisecting both Temple joints) to the lower edge of Crest, in Fig. I from C to D; the proper height of bridge in glasses for constant wear should exactly center the Frame in the horizontal meridian. Glasses designed for reading should set the Lenses lower than those intended for distance.

Width at Base is the distance between the lower points of Bridge at the place where they cease to touch the nose, in Fig. I from E to F. The width at base ranges from five-eighths to one inch or a trifle more in exceptional cases. It should not be fitted too tightly at the lower points as the inner canthus of the eye is extremely sensitive to continued pressure.

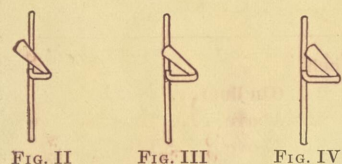

FIG. II

FIG. III

FIG. IV

The Inclination of Bridge is the position of its Crest forward or back of the plane of Lenses. The plane of Lenses is the surface nearest the eye, and this measurement is considered from the upper edge of Crest to the plane of Lenses forward or back. Fig. II represents a Bridge with regular shank which sets the Crest one-sixteenth inch forward of plane of Lenses. Fig. III shows a bridge with long shank which places the Crest on plane of Lenses. Fig. IV represents a Bridge with extra long shank which sets the Crest one-sixteenth inch back of the plane of Lenses. In extreme cases one-eighth or three-sixteenth inches back of plane may be required to avoid contact with the eye lashes.

The Angle of Crest of Bridge is the Angle which its under surface presents, when considered in relation to the Temples in the horizontal meridian, and the plane of Lenses in the vertical meridian. The regular Angle of S. S. Bridges is 45° and is always furnished unless otherwise specified.

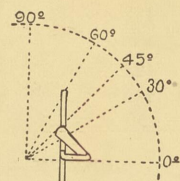

FIG. V

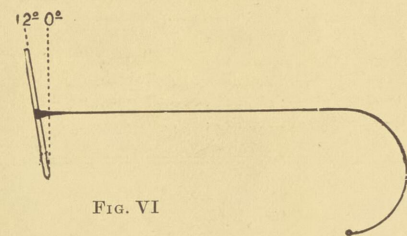

FIG. VI

The Angle of Lenses. End pieces regularly set the Lenses in a vertical position, but reading and bifocal Glasses are very desirable if supplied with angular end pieces, which have the effect of tipping the Lenses 12° forward from the vertical line. (See Fig. VI.)

Temple Width is the distance between the temples measured one inch from the Temple joints. The temple width may be increased by filing the fit backs of the Temple, or in extreme cases by the addition of long end pieces.

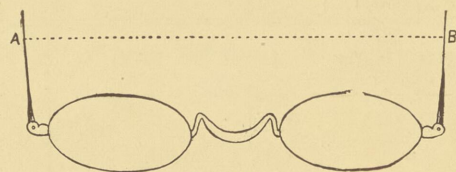

FIG. VII.

Full Temple Length, is measured from the joint to the tip (in Fig. VIII, from A to C).

Temple Length Joint to Curve is measured from the Joint to the beginning of Curve, (in Fig. VIII from A to B). Full Temple length in Riding and Cable Temples is regular 6 inches, short $5\frac{1}{2}$ inches, long $6\frac{1}{2}$ inches, extra long, $6\frac{3}{4}$ inches and 7 inches.

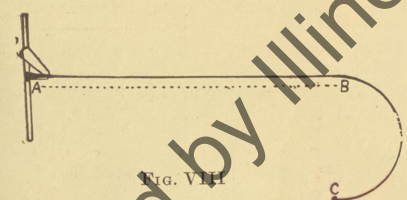

FIG. VIII

The Adjustment of Eye Glasses

The Spring. Springs are regularly made from full width stock, but may be ordered, diminished, reduced, oval diminished or oval reduced. Hoop-shaped Springs are more desirable on Eye Glasses with Offset Guards, as they admit of a wider adjustment of the Lenses. If the forehead is prominent, or the eyes deep-set, a tilting or Grecian Spring should be used. The tension of Springs should be adjusted or tightened by using a hollow chop plier.

FIG. IX. Hoop Spring FIG. X. Tilting Spring FIG. XI. Grecian Spring

LENGTH OF SPRINGS—

	Regular	Short	Long	Extra Long
Hoop Shape	2 inches	1 $\frac{7}{8}$ inches	2 $\frac{1}{8}$ inches	2 $\frac{1}{4}$ inches
Oblong Shape	2 $\frac{1}{8}$ inches	2 inches	2 $\frac{1}{4}$ inches	2 $\frac{3}{8}$ inches
Adjustable Shape	2 $\frac{1}{4}$ inches	2 $\frac{1}{8}$ inches	2 $\frac{3}{8}$ inches	2 $\frac{1}{2}$ inches

The Stud. “B” Studs are regular length, and are used in all cases unless otherwise specified. “A” Studs are indicated for a narrow Pupillary Distance, and “C” Studs for a wide Pupillary Distance. In extreme cases a “D” Stud may be used. In such cases however, it is better to increase the size of Lenses and use the shorter Studs, as they present a better appearance. Studs may be had inset, setting the Lenses away from the eye, or offset, setting the Lenses in toward the eye. Drop Studs set the Lenses lower. Diagonal drop inset Studs set the Lenses down and out. Diagonal drop Offset Studs set the Lenses down and in. When adjusting rimless Eye Glasses the Stud should be firmly grasped with the stud plier to avoid breakage of Lenses.

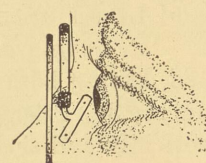

FIG. XII.
Inset Stud

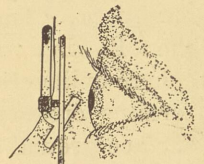

FIG. XIII.
Offset Stud

THE GUARDS—

	Regular Angle	Regular Angle Extreme Offset	To Set Lenses Low	To Set Lenses Low with Extreme Offset
Wells Offset	C1	B1	C02	B02
Anchor	7	7 $\frac{1}{2}$	4	6
Anatomical	17	27	317	327

After selecting the angle of Guard required, the surface of the blades should be carefully formed to fit the anatomy of the nose. The hollow chop pliers will be found desirable for this purpose. Guards with 5m—m wide blades are more comfortable and hold better than the regular width. The upper end of the Guards should touch more firmly than the lower portion to prevent the Glasses from tipping forward. Guards should be placed in position with the brow raised to avoid wrinkles when the skin is relaxed. To obtain an alignment of the Lenses when on the nose, hold the Lenses in the desired position, then note the position of the Guards with relation to the nose, and the bend of Guards necessary to retain the Lenses in this position will be apparent. To avoid breakage of rimless Lenses when adjusting, always hold the Lenses by means of the Stud pliers.

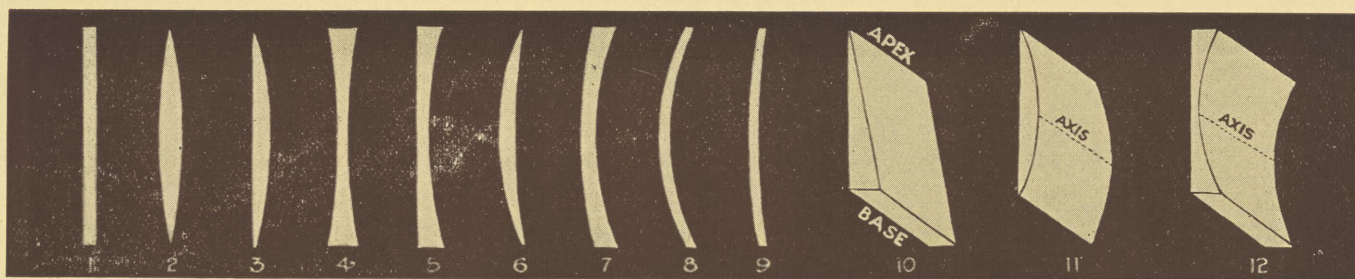

The Lenses. When selecting the size and shape of the Lens, a careful study should be made of the features of the case to be fitted. For narrow Pupillary Distance short oval Lenses are very desirable as this form shortens the length and adds to the width of a Lens. They also have an advantage in Glasses designed for reading, on account of the wider range. In most cases rimless Eye Glasses, except for Finger Piece Mountings should be drilled one-sixteenth inch above center in others one-eighth or even three-sixteenth inches up is required to set the Lenses properly. This is a very important consideration when writing the Prescription, as holes are drilled on center unless otherwise ordered.

Finger Piece Eye Glasses

The most popular styles of Eye Glasses today are those held in position by means of finger pieces and guards such as the Sta-So, Eureka, Elite, Handy, Shur-On, etc. In fitting them, first take the P. D. of the patient; this will at once indicate the number to be used. If the P. D. is 2 $\frac{5}{16}$ first try a No. 251 mounting which with O Eye lenses will give a P. D. of 2 $\frac{5}{16}$. If the P. D. is 2 $\frac{7}{16}$ select a No. 271 mounting giving the exact width with O Eye lenses. OO Eye lenses will add 1-16 in. to the P. D. In fitting Finger Piece Mountings it is well to remember the short oval forms of lenses, as you are thus able to obtain the exact P. D. and in addition an improved appearance. Short oval lenses will give you approximately the length of the next smaller size, thus OO Eye short oval will give you a lens in length the same as O Eye size. In numbering Finger Piece Mountings the figure in units place denotes the height of bridge, the higher the bridge the lower the mounting will set the lenses, thus if No. 271 sets the lenses too high, try a 272-273, etc., until the desired height is found. Finger Piece Mountings are made with inset studs to set the lenses away from the eyes and also with offset studs setting the lenses in towards the eyes. Watch the eye lashes and set the lenses as near to them as possible and avoid contact. To fit Finger Piece Mountings successfully a fitting set is required.

The quality of Lenses is dependent upon the clearness of the material used, the accuracy of the curves and the finish of the surfaces. The simplest forms of Lenses are called sphericals, the curves being equal in all meridians. Compound Lenses are those which combine two or more kinds of curvatures in a Lens in one of the following ways:—1st, having one surface curved spherically and the other cylindrically, forming so called sphero-cylinders; 2nd, having both surfaces curved cylindrically, but with their axis crossing each other, thus forming cross-cylinders; 3d, Prisms with a surface ground spherically, forming a sphero-prism, or with one surface ground spherically and the other cylindrically, forming a sphero-cylinder prism. The different qualities of Lenses we furnish under our various Trade Marks are as follows:

Faultless Crystal Brand.

The best and most desirable Lens it is possible to make; optically perfect, strictly interchangeable, accurately centered, of uniform thickness and perfectly edged from the clearest Lens stock.

American Brand.

Strictly interchangeable, optically centered and well edged, first quality stock and the best Lens for the price.

Imperial Brand.

A good Lens but not guaranteed absolutely perfect. First quality stock interchangeable, and while it is the cheapest grade we carry in stock, it is a Lens that will give satisfaction.

Kryptok Bifocals.

Are made from blanks which combine Crown and Flint glass by fusing, so as to make the reading segment invisible and without line or crack. Kryptok lenses are the most perfect bifocal made.

Opifex Bifocals.

These lenses are semi-invisible, and the best of the cemented kind. The segment is ground by a patent process making it so thin that the dividing line is almost invisible.

Cement Bifocals.

Are the most desirable of ordinary forms of bifocal Lenses. The lower or segment can be made in a great variety of shapes and sizes. In our Faultless Crystal Brand, both uppers and lowers are optically centered, being perfect in every detail.

Grooved Perfection Bifocals.

Made by cutting out a segment or section of the distance Lens, and inserting by means of a bevel and groove, another Lens for the reading part. Uppers and lowers are strictly interchangeable for all sizes of eye. Thus a great variety of different combinations can be made from a comparatively small stock.

Split Bifocals

Are inferior to the Perfection or Cemented styles. They are made of two parts equally divided in the center horizontally. They are usually supplied on inexpensive lines of goods.

Solid Bifocals

Are not recommended, as they give a prismatic effect which is confusing to most people. They are ground to order only and are not subject to return for credit.

Lenticular Lenses.

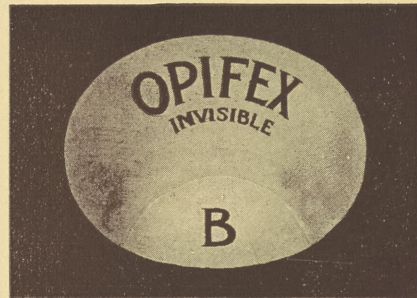

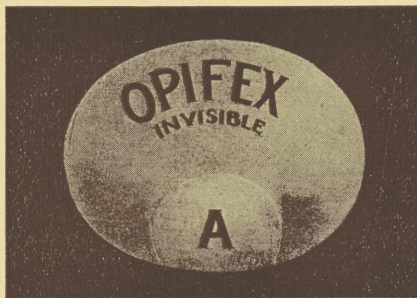

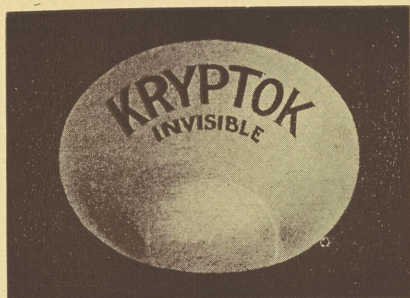

Reduce the thickness and weight of Lenses of high powers. In some cases they are very desirable.

Toric Lenses.

This term is now applied for convenience to all meniscus forms of Lenses. For full description see page 16.

Lenses

INVISIBLE BIFOCALS.

We are Licensed Distributors of Kryptok Invisible Bifocals and are Headquarters for these Lenses.

We carry one of the largest stocks of Kryptok blanks in the rough and partly finished to be found in the United States.

The increased facilities for making the higher grades of Bifocal Lenses, together with a reduction in the price has resulted in a large and increasing demand for these goods. They have many advantages over other forms of double vision Lenses, and are worn with comfort by many who could not accustom themselves to the ordinary forms. The absence of the dividing line, indicating "age," and the fact that no dirt can collect around the segments are strong features of these Lenses. The Kryptok Invisible Bifocal Lenses being made of one solid piece of glass will never require re-cementing, which is one of the necessary annoyances of the ordinary forms.

Kryptok Bifocals.

Kryptok Bifocals are made by combining crown and flint glass into a solid one-piece Lens by means of fusing. They are the Acme of Perfection in Lens making. They have hardness, uniformity of temper and harmony of color, and a greater brilliancy than any Lens ever produced. They are perfectly blended and invisibly united at the edges. On account of the immense stock of Kryptok blanks and partly finished lenses we carry in stock, all orders are filled with the same promptness as other Rx. work. No long annoying delays.

Kryptok Reading Segments.

The regulation size of Kryptok reading segments is 13x18 MM.; they may however be had in any size up to a width of approximately 22 MM. without extra charge. Sizes of greater width than 22 MM. are not recommended, and will only be furnished at an advanced price of \$1.50 per pair.

Kryptok Blanks.

We are Licensed Distributors of Kryptok Blanks from which the finished Lenses are made. They may be had in both flat and Toric forms with any added focus desired. Orders filled promptly upon receipt.

Price per pair	{ Flat form plano base, rough blank only, not finished	\$2.50
	{ Toric form 6.00D base, rough blank only, not finished	3.50

Opifex
Bifocals.

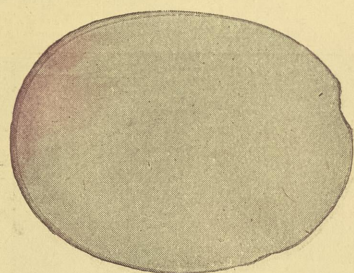

Opifex Bifocals are made by improved methods used in grinding segments to extreme thinness and almost to the point of invisibility. They are as near perfect as a two-piece or cemented Lens can be made. Opifex Bifocals may be had with style "A" or "B" segments. Style "A" is always supplied unless otherwise specified.

Toric Forms.

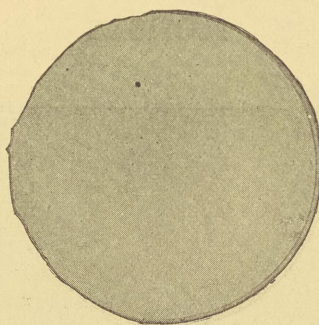

Any of the above Bifocal Lenses may be had in Toric form which is especially desirable as it places the reading portion more nearly at right angles to the usual axis (line of vision.)

Lenses ordered in m-m thickness, or to match sample or color if selected from stock. Per Doz. \$0.50

Lenses ordered in special thickness that cannot be selected from stock requiring special manufacture will be charged at prescription beveled edge prices, less 25 per cent.

Rough Cylinder Lenses, 6 m-m thick.50

Rough Cylinder Lenses, 8 m-m thick. 1.00

Round Lenses are large enough to cut 1½ inches in diameter.

Extra large size Lenses are large enough to cut Jumbo Eye size.

Thickness of Lenses is measured at thinnest point.

15

After much experimenting and research, we have at last produced a lens which effectively stops the Ultra-Violet rays, yet is soothing to irritable eyes and gives a better illumination than ordinary lenses. This wonderful lens is called the Radex. It has a greenish gray-amber tint, not objectionable to the most fastidious person, in fact in the light shade (No. 1 tint) it can scarcely be told from a white lens. Send for full descriptive circular of Radex lenses and add many satisfied customers to your list.

GENUINE HEALTH RAY LENSES.

The Health-Ray Lens is designated for those who desire a better quality glass than that used in ordinary spectacle lenses. Health-Ray glass is made by a process entirely different from that used for other optical glass and much after the manner of manufacturing glass for high grade telescopes. It is pure white even in large bodies and a block of Health-Ray Glass compared with a like quantity of Optical Glass will reveal its superiority.

Health-Ray Glass is superior to Pebble as like Pebble it transmits all rays of light in the proportion designed by Nature but has none of the objectionable grain found in pebble.

It is especially recommended for those taxing the eyes severely, as book-keepers and clerks.

Toric Lenses

The Improved TORIC Lens Showing
How it Fits about the Eye

Toric Lenses are those whose diametrically opposed principal meridians are of unequal refraction. By applying the principal upon which these Lenses are ground we are enabled to produce two curvatures of unequal radii on the same surface, thus leaving the reverse side for another curve, and giving us the opportunity for grinding a sphero-cylinder combination in periscopic or meniscus form. While more expensive than the ordinary forms Toric Lenses possess a number of distinctive features.

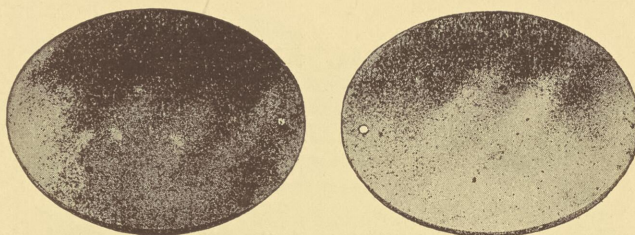

The Old Style Flat Lens

They are particularly commendable where Bifocal Lenses are required, as the segment for reading, owing to the form of the Lens, inclines toward and meets the usual axis or line of vision more nearly at right angles.

Prescription Department

There is always a demand for an article of superior quality, and this fact no doubt accounts for the rapid growth of our Prescription Department. We started out with the determination to excel, employed the most skilled labor, and equipped our plant with the highest development in optical machinery. No amount of labor or expense was spared and the result has been, that superior finish and perfection which invariably attaches itself to an article of our manufacture. "Good enough" has no place in our factory. We aim at perfection, both in the quality of work, and in point of service.

We desire customers to feel that our Prescription Department is conducted in their interests and that their wants will receive the same careful attention to detail, as if they personally were in charge. Our business has grown to its present proportions through the satisfaction given to patrons, and our record of the past may be considered your guarantee for the future.

Rx

Rx

We have one of the largest Lens Stocks in the country, which is an important consideration in the handling of Prescription Orders, as it insures that all orders will be filled without substitution. If its a special lens of any kind we can furnish it without any long annoying delay. Special attention given to tinted lenses such as **Radex**, **Amethyst**, **Euphos** and **Amber**. The constantly increasing demand for rimless spectacles and eye glasses has called for a higher development in machinery as well as facilities for handling this class of work. No detail is too small to escape our attention; sizes and shapes are exact; lenses are of uniform thickness and carefully drilled. Only the most skilled labor is used in this department, with the result that there is a complete refinement of detail in all our rimless work.

Lenticular Lenses.	Are made by grinding out a section of a plano or cylindrical lens, or cementing a convex scale about 18 to 22 millimeters in diameter in the center of the lens, thereby reducing the thickness and weight of extreme or high power foci lens.										

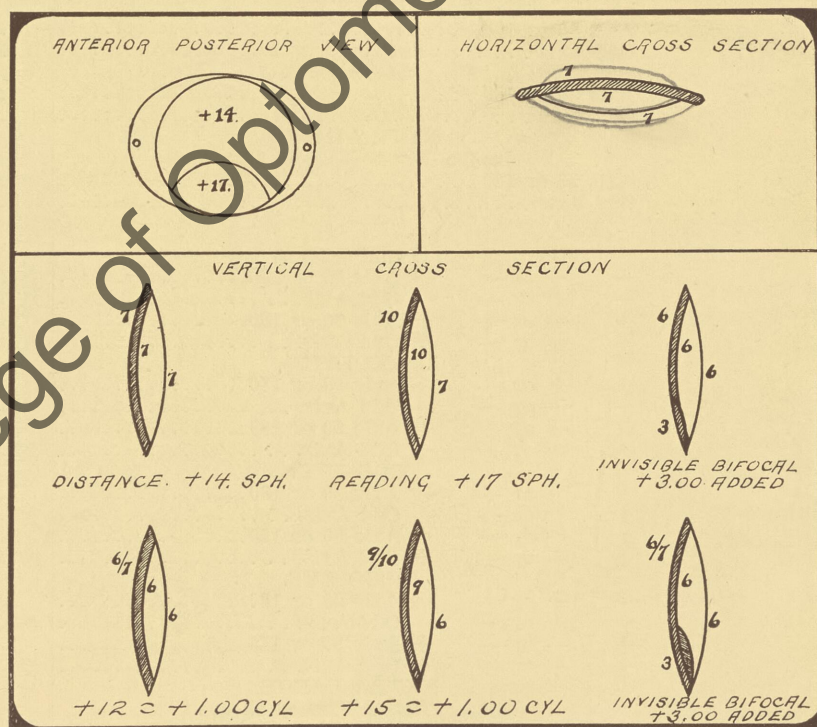

Improved Light-weight Cataract Lenses

The accompanying drawing illustrates the features of this lens which rests upon a deep periscopic or toric base.

In the hollow of the posterior concave, and cemented to it, is a lenticular segment of a high index and dioptric power. Its reduced diameter and high power is the feature that gives the whole lens its lightness.

The advantage of this lens will be seen at a glance. It has three surfaces for the different curvatures that may be required, counting the intermediate surface as one.

If the compound is upon the front surface, there still remains two others for the purposes for which they may be required. A fused segment may be on the forward surface of the base lens if spherical or on the anterior surface of the lenticular segment if the forward surface of the base lens required to be a compound. The remaining posterior surface of the lenticular is by the position of the fused scale available for any required spherical curve.

EXTRAS (WHOLESALE).

Cataracts, 8.50 to 20.00 Diopter.	\$1.50
Larger than OOO Eye (41x32 m-m).	1.50
Minus Disc instead of plus to either of the above (disc for distance instead of reading).	4.00

Single Lenses One-half the Above Prices.

EXTRAS (RETAIL).

Cataracts, 8.50 to 20.00 Diopter, per pair.	\$2.00
Larger than OOO Eye (41x32 m-m).	2.00
Minus Disc instead of plus to either of the above (disc for distance instead of reading).	4.00

The above are the minimum prices at which Kryptok lenses must be sold. These lenses are controlled by patents and the prices are set by the patentees. We understand that anyone ordering them of us by so doing contracts to uphold these prices.

SPECIAL NOTICE

We are Western Distributors of Kryptok Lenses and on account of the immense stock of blanks and partially finished lenses we carry in stock. All orders for special lenses are filled promptly, and without the delay usual with other houses. We have the most modern lens grinding machinery and all the Kryptok lenses produced by us are accurate as to curvature and axis. We make a specialty of grinding high grade lenses and our prices are no higher than you pay others for ordinary work.

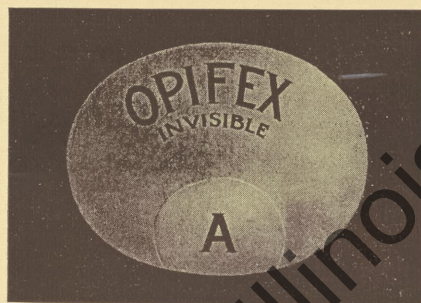

Kryptok Bifocal

Old Style Bifocal

"OPIFEX" CEMENT BIFOCALS

"Opifex" Bifocals are the result of improved and patented methods used for grinding segments or wafers to a point of invisibility, and doubtless as near perfection as can be attained in a two-piece or cemented double vision lens.

Sphero-Cylinder + C - Will be transposed into + C + or - C + combinations and charged at those prices.

After much experimenting and research, we have at last produced a lens which effectively stops the Ultra-Violet rays, yet is soothing to irritable eyes and gives a better illumination than ordinary lenses. This wonderful lens is called the Radex. It has a greenish-gray-amber tint, not objectionable to the most fastidious person. In fact in the light shade (No. 1 tint) it can scarcely be told from a white lens. Send for full descriptive circular of Radex lenses and add many satisfied customers to your list.

Genuine Health-Ray Lenses

The Health-Ray Lens is designed for those who want a better quality glass than that used in ordinary spectacle lenses. Health Ray glass is made by a process entirely different from that used for other optical glass, and much after the manufacture of glass for high grade telescopes. It is pure white even in large bodies, and a block of Health Ray glass compared with a like quantity of Optical glass will reveal its superiority.

Health-Ray glass is superior to Pebble as like Pebble it transmits all rays of light in the proportion designed by Nature, but has none of the objectionable grain found in Pebble.

It is especially recommended for those taxing their eyes severely as bookkeepers and clerks.

NOTICE—Lenses with Axis or Cylinder other than 90 or 180, extra, per pair, 10 cents. For other Extras, see "Prescription Extras," page 35.

For Prescription Lens Extras, See Page 35.

OMAHA OPTICAL COMPANY

Tinted Lenses

We make a specialty of grinding tinted lenses and carry a large stock of blanks from which special lenses of all kinds are made. The illustration above shows approximately the difference in the density of tinted lenses, No. 1 shade is light and No. 6 shade is dark. No. 0 shade is not shown; it is exceedingly light, there being only a suggestion of tint. It is sometimes not possible to match the shade of tinted lenses unless we grind then in pairs, and it is better to always send a sample when possible. Lenses with strong curvatures should not be ordered in dark shades of tinted lenses as the density of color increases with the thickness of the glass. Radex lenses, being of light shade are satisfactory even in the stronger numbers.

Radex Lenses.

The Radex lens is made from stock imported from Germany where it is made for us according to a special formula. For a full description of the lens send to us for circulars.

Euphos Lenses.

Euphos glass is of a peculiar greenish tint; it absorbs all blue, violet and ultra-violet rays of light and its use is recommended to those employing artificial light to any considerable extent.

Roentgen Lenses.

Roentgen glass absorbs the injurious rays given off by powerful electric lights. These lenses are valuable for the use of electrical workers. For price add 10 cents per pair to the price of Radex of same kind.

Amethyst Lenses.

Amethyst tinted lenses are recommended by an eminent Philadelphia Eye Specialist, who has successfully used them for years to adsorb the Ultra-Violet rays of light.

Amber Lenses.

Standard amber lenses are about No. 3 shade, and are furnished at the same price as blue and smoke. They absorb the Ultra-Violet rays but are objectionable to some on account of their dark shade.

Smoke or Blue Lenses.

Are now used mostly for protection against strong light—they have no chemical action and dim the vision. Their use is not recommended except for protection and then for temporary wear only.

We illustrate above the different forms and sizes of Saddle Bridges. The Pupillary Distance being represented by letters L, M, N, O, P and Q; the height of Crest by the figures $\frac{1}{2}$ to 4, the $\frac{1}{2}$ numbers representing sixteenths and the whole numbers eighths. Regular Shank Bridges, place the upper edge of Crest of Bridge one-sixteenth inch forward of plane of Lens, (+ 1-16). The plane of Lens is the surface nearest the eye. Long Shank (L. S.), Bridges place the Crest on plane of Lens while Extra Long Shank (E. L. S.) places the upper edge of Crest one-sixteenth inch back of plane of Lens (-1-16). Bridges may also be had with any special inclination 1-8, 3-16, etc. The table on opposite page gives the complete dimension of Bridges on the Saddle System (S. S.)

Our Specialties

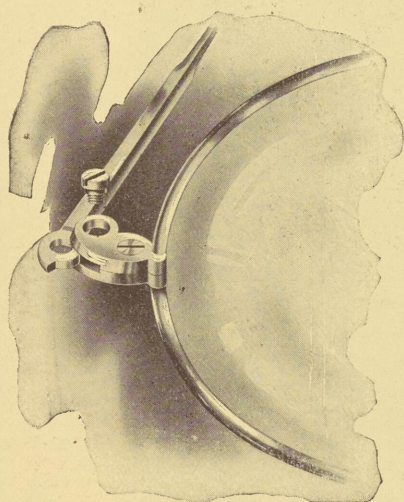

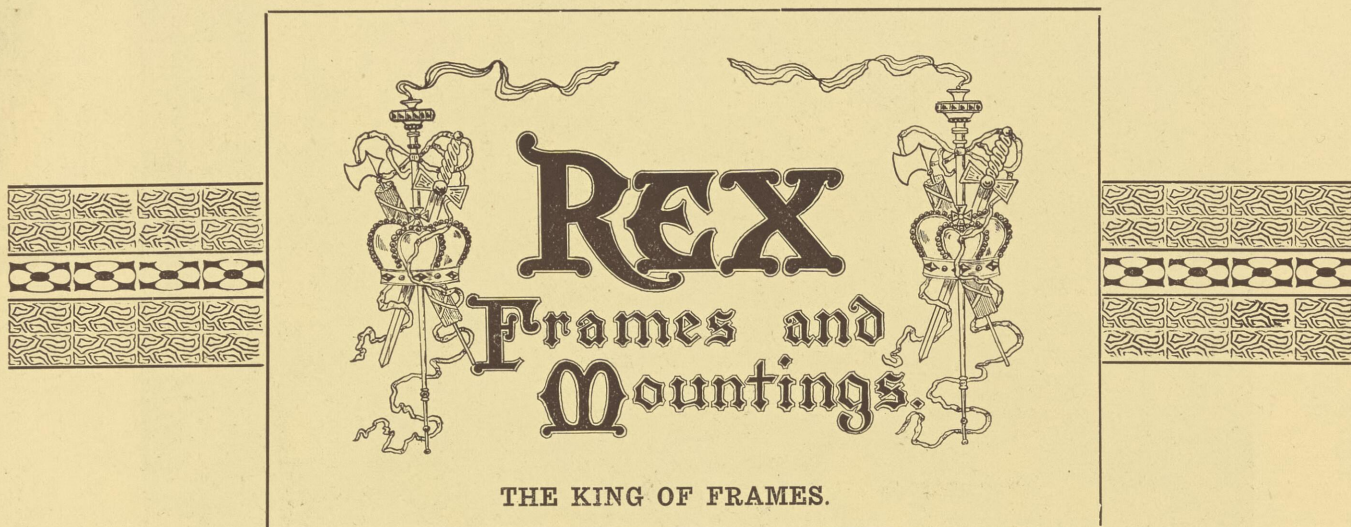

Figure 1

To meet the demand for a higher grade line of Gold Filled Goods and of slightly heavier weight we designed the Rex Frames and Mountings.

This line of Gold Filled Goods is a distinctively new production in the manufacture of Spectacle wear, and the principal features here illustrated merit the careful consideration of the trade. These frames and mountings are the highest grade manufactured and are offered by us in response to a demand for goods of superior quality. They are made from 1-5th 12K Gold Filled Stock and consequently have a shell or covering of gold just twice as thick as the ordinary Rx quality. They

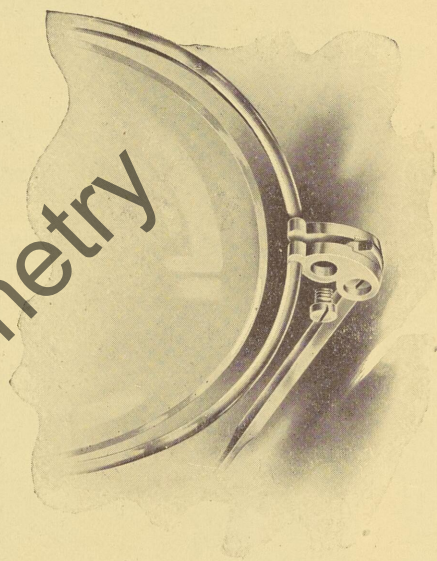

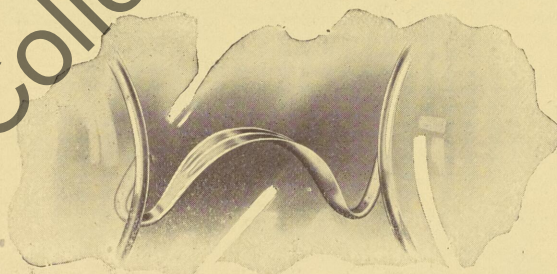

Figure 2

will out wear any Gold Filled Goods ever placed upon the market. Figure 1 illustrates the possibility of removing the temple without in any way disturbing the lens—a new and practical feature never heretofore used. Figure 2 shows the possibility of removing the lens without in any way disturbing the temples—another advanced idea and exclusive with the Rex line of Gold Filled Goods. Note the illustration of the reinforced bridge. This construction is

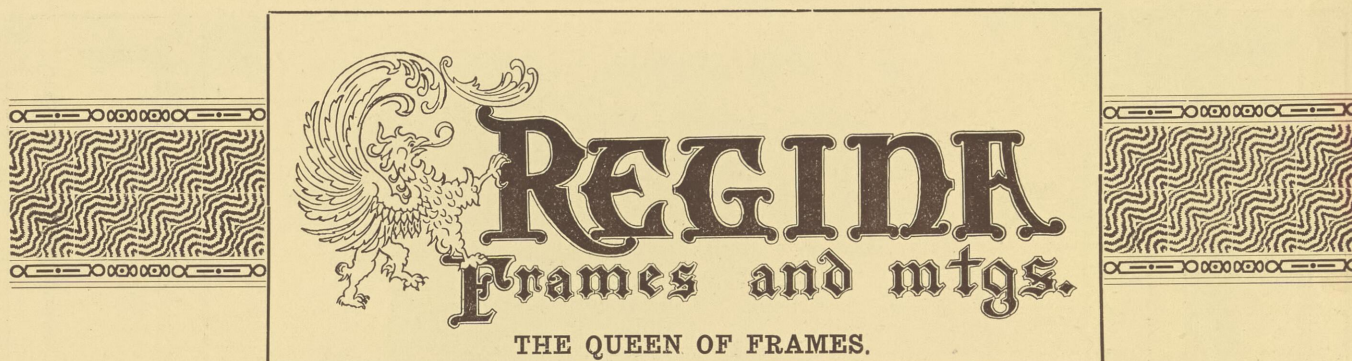

THE RE-INFORCED BRIDGE.

very stiff and strong and presents to the nose a rounded, wide bearing surface that will not cut into the flesh. It is an improvement over the old style cylinder bridge and is in no way objectionable in appearance.

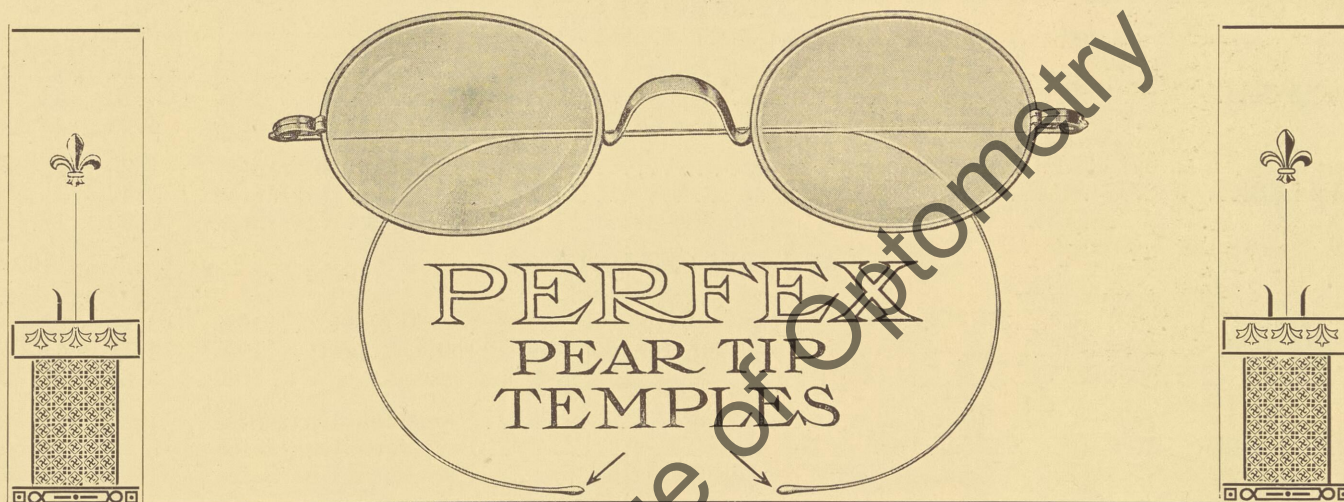

Stock Number	Description	Prescription Price	Price Per Dozen

Our Specialties

The Regina line of Gold Filled Frames and Mountings are made from 1-5th 12K Gold Filled Stock, highly finished. The Regina is the Queen of Frames and a beautiful companion to the Rex line from which it differs in being of lighter weight, and made with saddle bridge. These frames are made especially for us and according to our own specifications and are the result of years of experience in the optical business.

THE YELLOW FELLOW.

The Standard for Quality

Dealers and consumers alike are demanding a higher standard of Gold Filled Frames. It is this demand for an article better than ever heretofore manufactured that has prompted our designing the **Yellow Fellow** patented Gold Filled Frames and Mountings. They are made from 12-karat stock, have a beautiful rich color and a finish equal to the finest solid gold Frames. They combine superior style and finish with the best wearing qualities. These Frames have remarkable stiffness due to a patented process of swaging, subsequent to soldering, which positively eliminates the possibility of soft fronts.

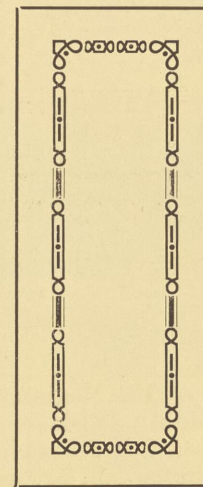

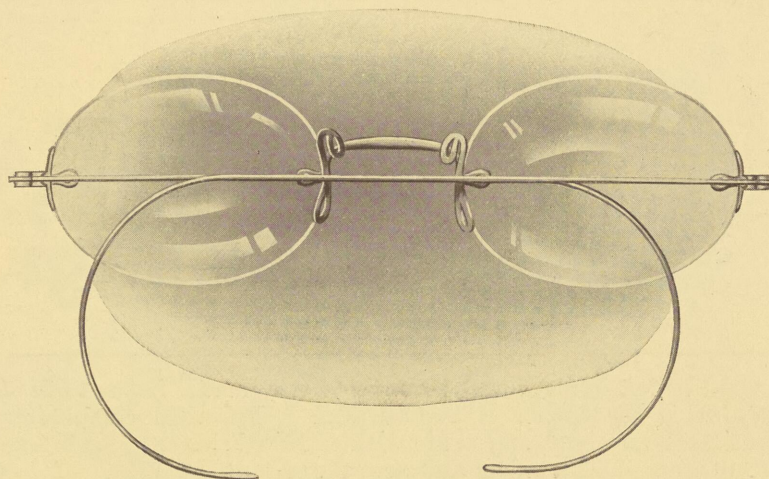

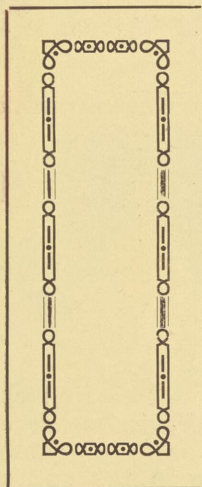

The end pieces are made from specially stiff metal which permits the temples to be perfectly fitted, and prevents them from working loose even after continued use. The screws and dowels are made from hard, non-tarnishable stock, and the ends are lapped to size and finish before being inserted.

Yellow Fellow Frames and Mountings are made with flat butt temples which are perfectly interchangeable. Note the manner in which the bridge joins the eye wire without any visible reinforcement, and the complete refinement of detail in the entire frame. They will strongly appeal to those who are looking for the best.

EASY-CREST FRAMES AND MOUNTINGS.

What is the most common complaint of Spectacle wearers? You have heard it so often that you have learned to disregard it and accept it as a matter that cannot be remedied. But here we offer a remedy and one that positively prevents the cutting of the nose by the crest of the bridge, and the cutting of the ears by the temples. The Easy-Crest is just what its name implies.

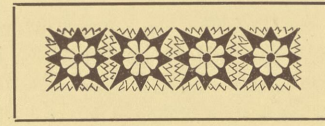

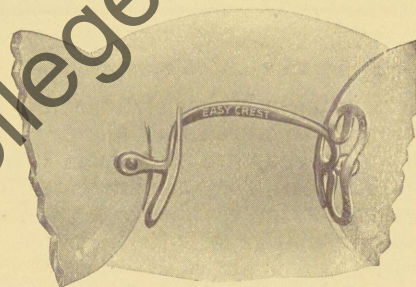

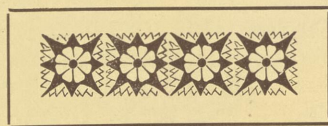

Throw away the old fashioned bridges that torture your patients and give them comfort with Easy-Crest centers. It means one more satisfied customer wherever it is used. No more cutting of the nose; no more cutting of the ears. Send for sample.

EASY-CREST FITTING SETS.

We furnish Fitting Sets of Easy-Crest Centers in the following dimensions. The figure in tens place represents the P. D. in sixteenths of an inch in excess of 2 inches, while the figure in units place represents the height of bridge in sixteenths of an inch; the letter following the number indicates the position of crest, "F" meaning forward of plane of lenses, "L" meaning on plane or line of lenses and "B" back of plane of lenses; thus Bridge number 43F means 24-16th P. D.; 3-16th high and 1-16th forward of plane of lenses. These dimensions are based on OO Eye size lenses, OOO Eye size adds 1-16 inch to the P. D. A complete fitting set of 12 mountings is furnished with the following centers. If a set of 6 mountings is desired, these centers indicated with a * preceding the number are furnished.

BRIDGE NUMBER	PUPILLARY DISTANCE	HEIGHT OF BRIDGE	POSITION OF CREST

OMAHA OPTICAL COMPANY

Our Specialties

EUREKA

THE PERFECT FINGER PIECE MOUNTING.

After months of experimenting we have produced a mounting that eliminates all of the undesirable features that have retarded the progress of other styles of finger-piece mountings. With the Eureka Mounting the guard is rigid where it should be to hold the lenses in perfect alignment, and it is rocking where it is necessary for self adjustment.

The Eureka Mounting is made with a broad band or ribbon spring which is practically concealed under the stud. This spring is far superior to the old style coil or lever spring and being so much heavier will not break.

This ribbon spring makes the tension even during the entire play of the guard. The spring can quickly and easily be removed; its tension can be controlled at will—weak or strong, and it is not necessary to remove the guard to adjust or change the spring.

With two bends of your pliers you can throw the lenses up, down, in or out, from 1-32 to 3-16 of an inch. No more trouble with glasses slipping off at the top.

No more trouble with glasses setting too high or too low.

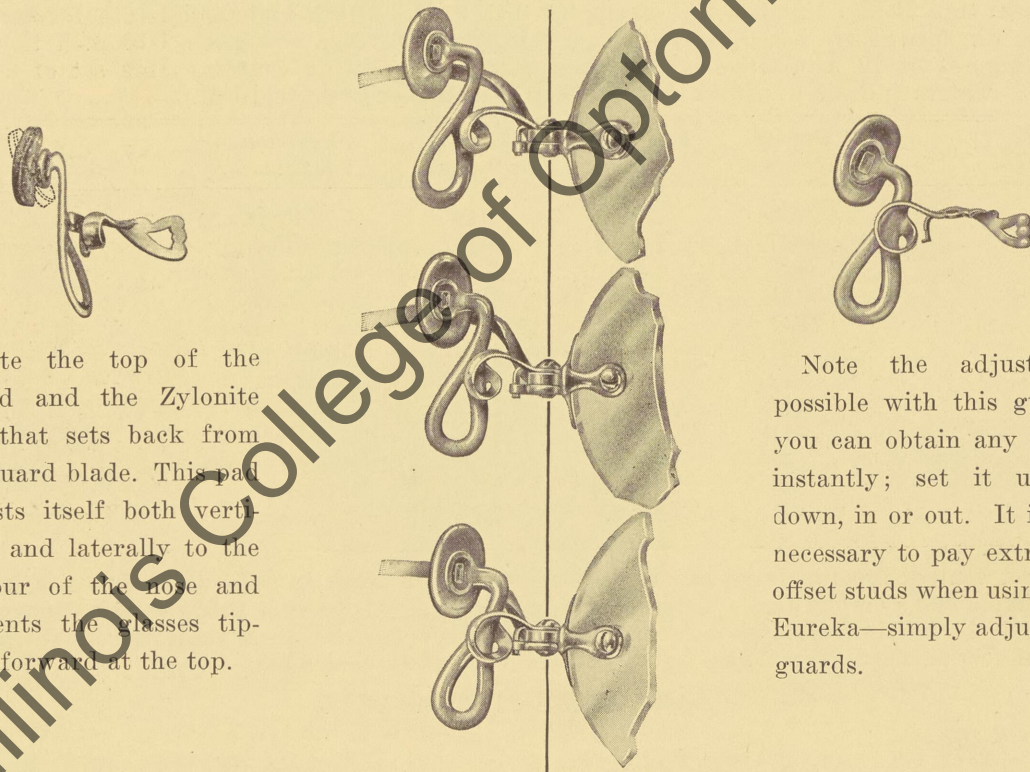

No more trouble with eye lashes touching the lenses.

In fact the Eureka mounting does away with all your eye glass troubles.

No more coil or lever springs continually breaking.

It is a combination of the rigid guard and the rocking guard and retains the strong features of each, but none of their faults.

The Eureka speaks best for itself. Send for a sample mounting.

Note the top of the Guard and the Zylonite pad that sets back from the guard blade. This pad adjusts itself both vertically and laterally to the contour of the nose and prevents the glasses tipping forward at the top.

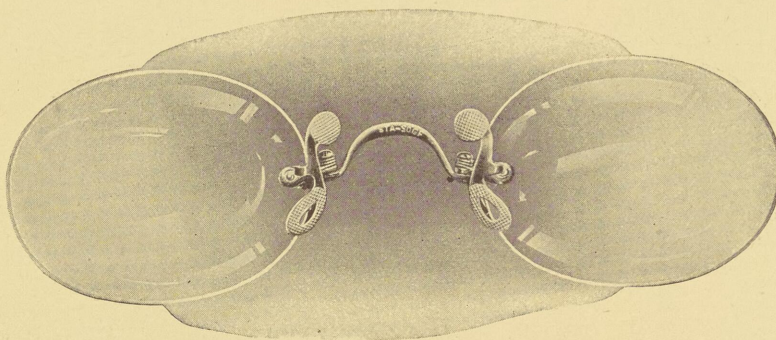

Note the adjustment possible with this guard; you can obtain any angle instantly; set it up or down, in or out. It is not necessary to pay extra for offset studs when using the Eureka—simply adjust the guards.

THE STA-SO EYE GLASS MOUNTING.

Rigid Guard.

Has stood the test of time and not been found wanting.

The superiority of the Rigid Bridge Finger piece Eye Glass Mountings over other styles is now well established. They have a fixed Pupillary Distance, and a perfect alignment of the Lenses making them desirable for use with cylindrical Lenses, and thus removing one of the greatest objections to the use of Eye Glasses. The Sta-So Mounting combines all of the good features of other Rigid Bridge Mountings, but has none of their bad ones. In addition it has several points of superiority.

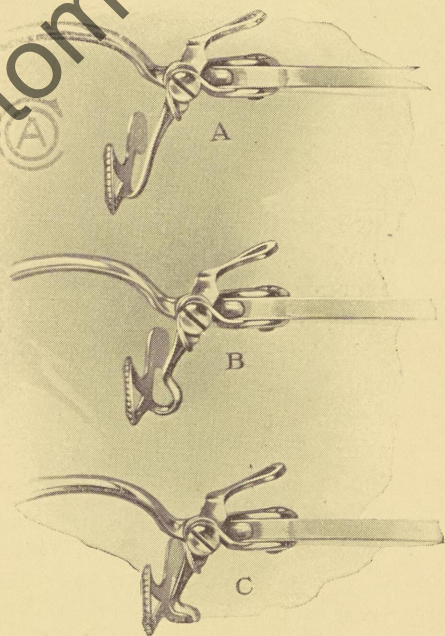

1. A guard of new shape, so designed that it avoids wrinkling the fleshy portion of the nose. It admits of a great variety of adjustment; it has a wide bearing surface, therefore does not "cut in," but holds the Lenses firmly in position, with ease and comfort to the wearer.
2. A stop on arm of Guard, that prevents any undue tension to spring and thus reduces breakage.
3. A patented Tubular Washer which maintains the finger piece in position and prevents vertical motion. This Washer also prevents the finger piece from binding.
4. The end of the Pivot Screw is riveted over to prevent the screw working loose or giving out through continued use, although the screw can be easily removed should occasion require.
5. The Spiral Spring is capable of adjustment with pointed nose pliers, tightening or loosening as may be required.

The Most Popular
Finger Piece Mounting
on the
Market Today

You Will Eventually
Fit the Sta-So,
Why Not Now?

**IMITATED BY OTHERS,
BUT NOT EQUALLED.**

The Illustration above shows the manner of placing the lenses away from the eyes by using a Sta-So mounting with INSET studs; also illustrates the use of offset studs to set the lenses in towards the eye. A feature original with the Sta-So mounting.

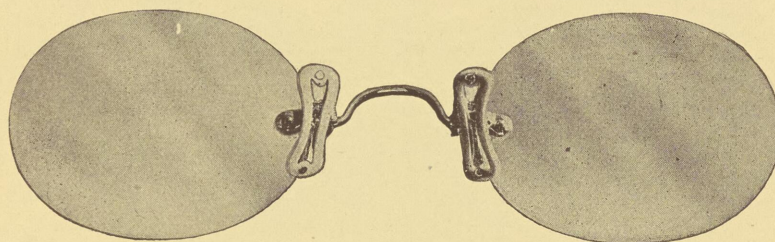

We guarantee this Mounting against any imperfection in workmanship or material and recommend it to our customers as the best Eye Glass Mounting ever produced.

Illustrating the possibility of adjustment of the loop arm of the Sta-So mounting. Note the simple manner of changing the angle and position of the guards in "A," "B" and "C."

Our Specialties

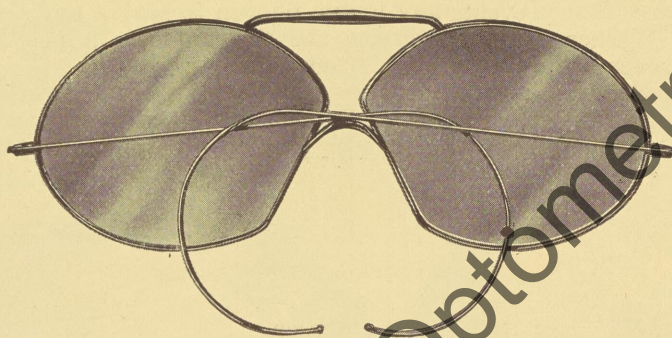

THE ELITE EYE GLASS MOUNTING.

Rocking Guard.

To those who prefer the "Rocking" form of Guard, we offer the "Elite." This Mounting is made in both Zylonite and Sanitary Guard, and will with the minimum of adjustment conform to the peculiarities of each case. It is as near "self-adjusting" as it is possible to make it, and is especially desirable where it is to be mailed "direct to patient." This Mounting is guaranteed against imperfection in workmanship or material. For full directions to fit "Elite" Mountings see Page 163.

Caution. When fitting finger piece Mountings, do not select too deep a Bridge. The Crest should lay flat on the nose, no space intervening.

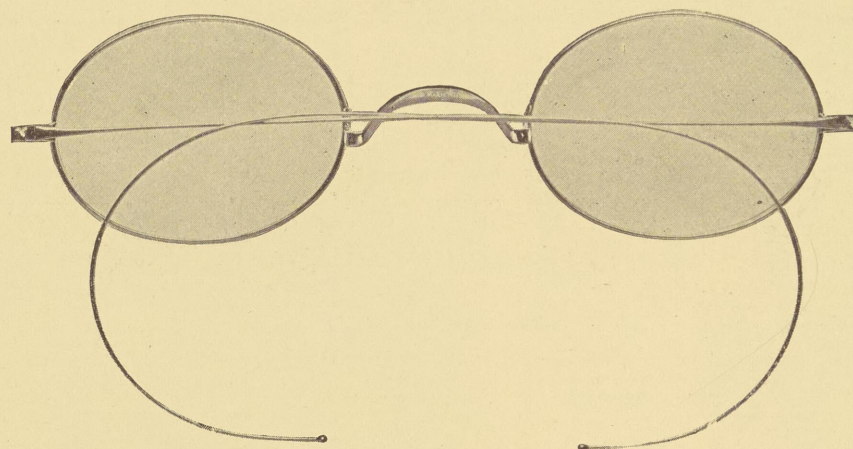

IDEAL SHOOTING GLASSES.

There has long been a demand among Sportsmen generally and Trapshooters particularly for a glass that would effectively protect the eyes from the back blast of powder and at the same time subdue the light, increase the vision and definition without weakening the eyes and making the vision temporarily worse immediately after removing the glasses. Such a combination a few years ago would have seemed impossible, but by very careful experimenting with the effect of certain lenses and certain colors upon a spectrum formed by throwing a calcium light through a 60-degree bi-sulphate of carbon prism, we found that certain shades of amber lenses would effectually absorb the actinic rays. Further experimenting with the shades of our amber lenses applied as a ray filter to a camera demonstrated without any possible doubt the value of such lenses for outdoor work. The expense of manufacture was the greatest drawback. Amber lenses of various kinds are in legion, but it was impossible to purchase amber lenses of a perfect curve, so it was necessary to make special tools for grinding the lenses we furnished in order to overcome the spherocylinder and prismatic effect and eliminate the air bubbles commonly found in the pressed imported lenses heretofore used. As a result we offer a plain amber lens of a cylindrical shape that will conform to the frontal curve of the shooters brow, so the rays entering the eyes will always be perpendicular to the surface of the lens. Thus a field of vision of about 150° can be obtained. If desired with prescription lenses we recommend the Toric form or curved variety as it is necessary to obtain the curved effect, so as not to reduce the field of vision. The frames are of 1-10th 12K gold filled stock and are sold under our usual permanent guarantee.

Opera Glasses.	We repair and supply new parts to Opera Glasses, Field Glasses and Telescopes. Prices are governed by Time and Amount of Material used.		

Note—We tighten the joints, true and polish without extra charge, all jobs sent us for repairs. For changing frame to measurements given, we make a minimum charge of 15 cents. Bridges that have been broken and soldered cannot usually be rebent to new measurements.

STUDS.

Note—B length Studs are furnished unless otherwise specified. The length of Studs is measured from the bottom of box to the inner surface of the strap. Straps 2 m—m wide are furnished unless otherwise specified. Straps wider than 2 m—m subject to an extra charge.

The illustrations above are actual size. The number of spring denotes its length and shape. The length is expressed in inches and eights, the tens denoting inches and the units eights, thus No. 21—2 $\frac{1}{8}$ inch; No. 25—2 $\frac{5}{8}$ inch. Oblong springs are indicated by the letter "R;" Hoop springs by the letter "H," and adjustable shape by the affix of the letter "C." Tilting Springs are denoted by the suffix "T" and Grecian Springs by the suffix "G." Thus No. H21G—Hoop Spring, 2 $\frac{1}{8}$ inch, Grecian style.

Will hold Eye Glasses securely in position. Can be quickly put on and off.		

HANDY TEMPLE ASSORTMENT AND REPAIR SET.

The Handy Temple Assortment and Repair Outfit contains $5\frac{3}{4}$ dozen assorted gold filled and alumnico temples in riding, cable and comfort cable styles. They are made in riveted and split joint and assorted lengths. The unbent temples are all 7 inches long and can be bent for either the right or the left side and cut to any length desired. The ball tip can then be put on the end of temples by using the special plier that comes with the set, with the complete instructions how to proceed. There is an assortment of screws, dowels and ball tips for temple ends. All contained in black cloth covered wood box as illustrated. The temples only in this case at regular dozen rates will cost more than the entire outfit.

	Price Each
Handy Temple Assortment and repair set..	\$10.50
Handy Temple Plier for Ball Tips.....	2.00

OMAHA OPTICAL COMPANY

AMBER MOTOR GLASS—RIMLESS.

Entire Glass Front

The Motor Glass above illustrated is the most perfect eye protector ever constructed. It conforms closely to the lines of the face and nose and thus excludes all dust and wind. The vision is unobstructed as the entire front is of glass, with no uncomfortable cloth or chenille binding. The bridge center is hinged thus making them adjustable to the curves of any face. The Riding Temples may be covered with rubber tubing thus making them comfortable on the ears, or they may be had with Comfort Cable Temples. Being open on the sides the Motor Glass does not heat the eyes. While these protectors are designed especially for motoring they are perfectly adapted for many other purposes such as trap shooting, golfing and other out door sports. As it is now an admitted fact that Amber lenses afford the maximum protection against the Ultra-Violet rays of light, and at the same time actually increase the acuity of vision, we furnish the Motor Glass with Amber lenses unless otherwise specified. They may be had with white lenses when so ordered. They may also be had with Rx. lenses ground to any correction desired. The Motor Glass is made regularly with either Curved Amber lenses or with Meniscus Amber lenses on a Minus C. D. base curve.

	Stock Number		Price Per Pair	Price Per Doz.

Automatic Eye Glass Holders

This Notch is the Only Stop
To Unlock Draw Chain Out of Notch

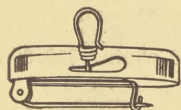

THE ELGIN EYE GLASS HOLDER.

1 inch long by $\frac{3}{8}$ inch in diameter and of very neat appearance, has a smooth spiral spring of even tension and is guaranteed. We will replace any that prove defective.

This holder has but one locking device and when this is released the chain reels its full length with either a rapid or slow movement and without any fear of interruption.

	Price Per Dozen
No. 12E—Black Enamel German Silver Chain and Hook.....	\$3.30
No. 14E—Black Enamel Gold Filled Ends Chain and Hook.....	5.10
No. 16E—Gold Filled, Gold Filled Chain and Hook.....	10.80

THE SIM-PULL EYE GLASS HOLDER.

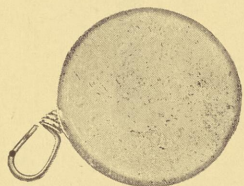

The chain of the Sim-Pull Eye Glass Holder is caught by raising the chain in the slotted grove at the side. A ring soldered at the end of the chain makes a secure catch. A good reel at the price.

OMAHA OPTICAL COMPANY

Spectacle and Eye Glass Cases

In presenting our line of Spectacle and Eye Glass Cases, we have exercised every care to offer only such goods as will conform to the usual high standard set by us.

Our Cases are made from Forms, uniform in shape and size, and are covered with the best grade of leather. Their superior quality will at once be apparent by comparing them with ordinary Cases. Owing to frequent fluctuations of prices in the leather market, prices on cases are subject to change without notice.

Lettering. We have in connection with our Case Department, a complete plant for printing Spectacle and Eye Glass Cases, thus avoiding the delay which is so annoying to customers. Our presses are specially designed for this work, producing results of the highest order. We use extra fine quality Gold Leaf, which insures a permanent gold lined impression. All cases are lettered on the front when the style of the case and size of printed matter will permit, otherwise they are lettered upon the back. We recommend the "J" or Water Grain Leather as best adapted for lettering with Gold Leaf. When lettering cases in gold the form is set up with brass type which is then carefully heated to proper temperature. The make ready is a large part of the expense and therefore the minimum charge for lettering is \$1.00 which covers a quantity of from one dozen to six dozen; larger quantities at the rate of \$2.00 per gross.

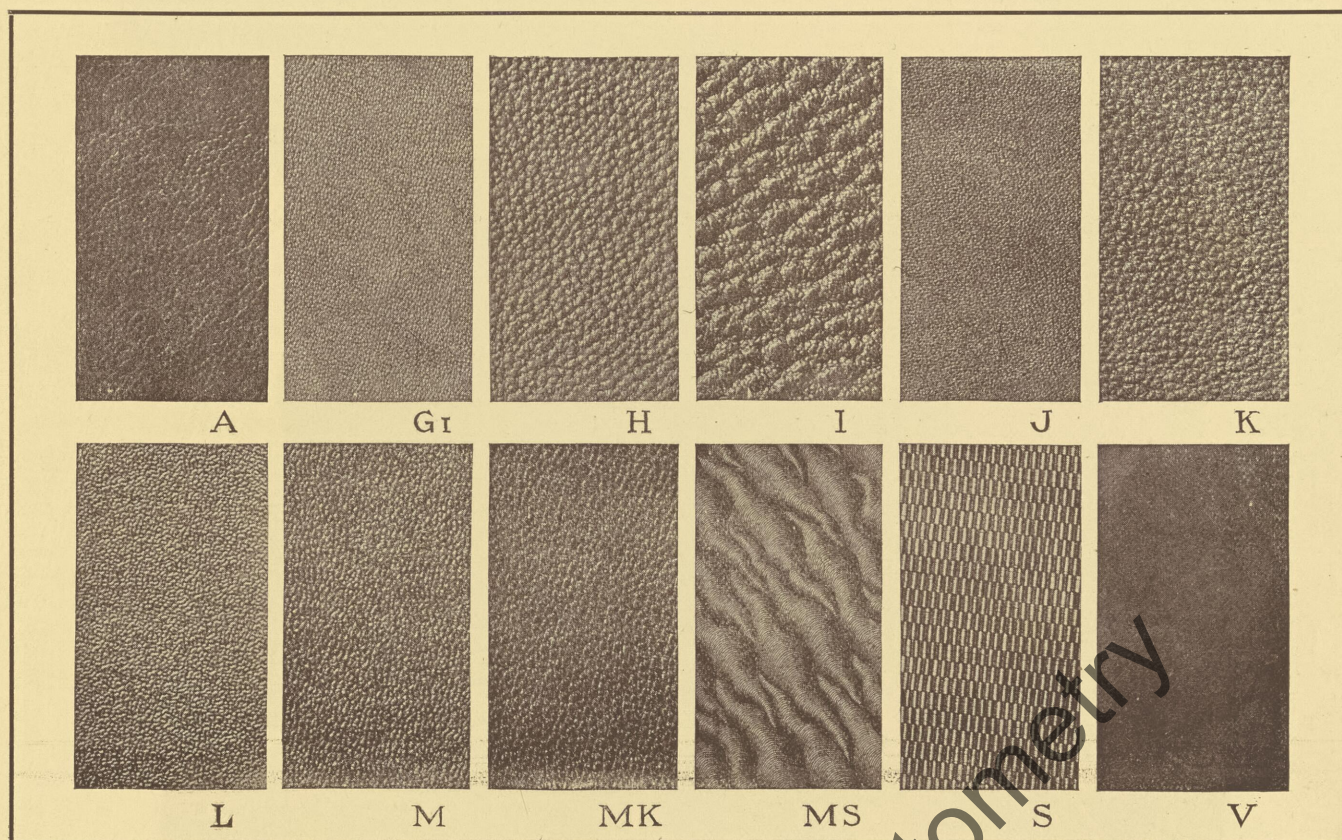

When Ordering Cases great care should be used in designating Catalogue Numbers and kind of Leather desired. If Cases are to be lettered, send explicit directions, enclosing when possible a business card, to avoid any errors in composition.

Cases Made to Order. We are prepared to make any style of Spectacle or Eye Glass Case to order. The following list of Leathers may be used in covering them; designate by letter, and state color desired. Prices quoted upon request.

Brass Dies. We suggest the use of Brass Dies in lettering cases. They increase the cost of the first order, but are the property of the customer and can be used on subsequent orders. We are prepared to make Brass Dies of special design, and will submit sketches upon request.

LEATHERS.

SPECIAL SELF CLOSING CASES.

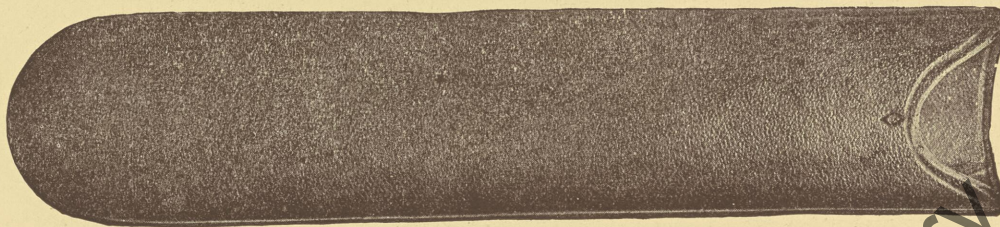

The above illustration shows a few special cases of our manufacture; cases that are designed for high class trade, and that may be sold instead of being given away. They may be had with various styles of fancy leathers and with special linings of either velvet or chamois in colors to match the case. Corner, center or band ornaments may be included at an increased cost. We invite correspondence.

Illustrating Block Style Letter

METAL INITIAL LETTERS.

The use of Metal Initial Letters is quite popular and the demand is increasing. They may be used on spectacle and eye glass cases, on jewelry boxes and for many other purposes. They are made of solid metal with an adhesive on the back, they lie flush with the surface of the case and will adhere permanently; easily applied while the customer waits. Neat in design and finish; they cost one cent a letter, serve to identify lost glasses, and gratify the vanity in all of us for having our initials on our own possessions. They are both useful and ornamental. Furnished in a partitioned box containing 500 letters properly assorted, complete with a special plier for applying the letters to the case.

Trial Sets

The refractionist must largely depend upon the accuracy of his Trial Lenses for the correctness of his work and in making the selection of this necessary adjunct to his equipment, he has little to aid him, but must depend almost solely upon the standing and reliability of the maker. It therefore behooves us to guard carefully the enviable reputation of our Trial Sets. The quality of stock, superiority of finish, and durability of construction are details carefully considered in connection with accuracy of foci. All Lenses, including Prisms are ground in the Dioptric system. All Trial Sets except the pocket styles, are regularly supplied with white celluloid strips stamped with focus numbers and filled with black, making them clear and indelible. All of the larger styles are regularly made with removable velvet lined trays. We would call special attention to our **all wood** trays which are gaining in popularity, owing to their cleanliness and durability. Our Traveling Dress Suit Style Cases are covered with Black Seal Grain Leather with Nickel Plated Trimings, including quadrant stop for cover and with removable velvet lined tray with solid bottom. Space is provided underneath tray for stock, also with removable tray for interchangeable Lenses, holding one gross pairs. The cover contains a pocket for holding test type.

The purchase of a Trial Set is a matter of the utmost importance to the practitioner, as the reliability of his work must depend upon the accuracy of his equipment. In the manufacture of Trial Lenses the imperfect ones—decentered spheres and off axis cylinders—fail to pass inspection and are sold to unprincipalled dealers at low prices. They are then resold below the price of Standard Guaranteed Trial Sets but are expensive at any price, as one defective lens in a trial set will in time cause a loss many times greater than the original cost of the case. Our Trial Sets are perfect in every respect and a written Guarantee will be furnished with each one at the time of purchase.

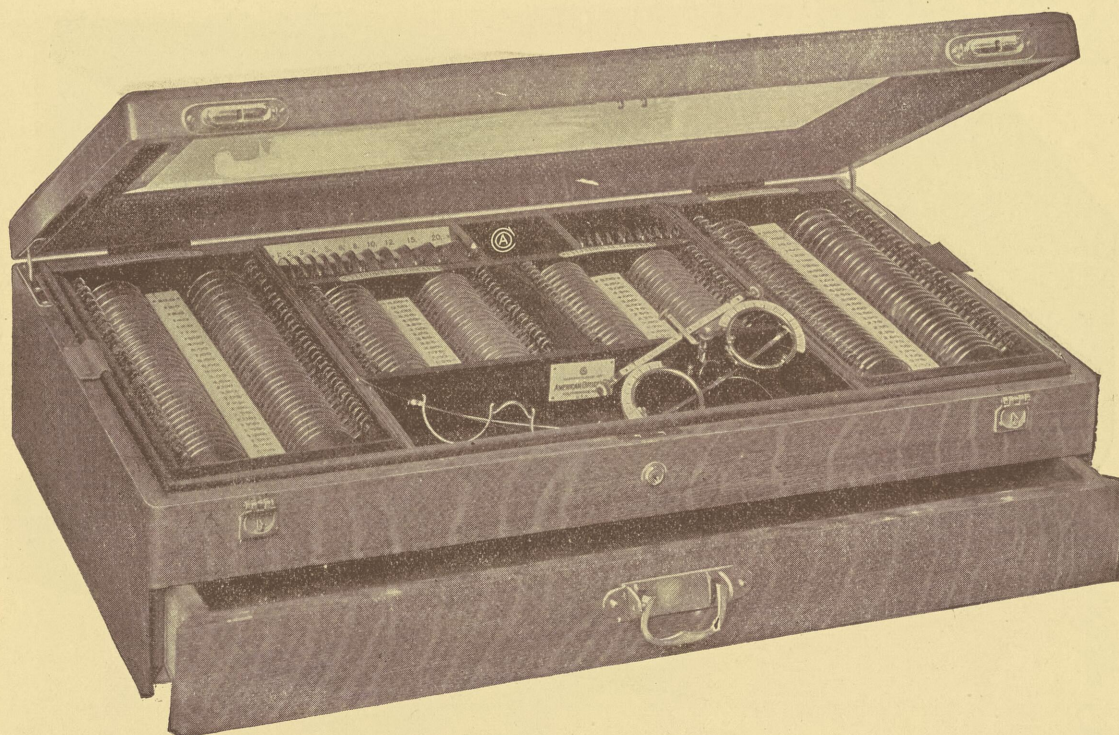

We are prepared to make any special style of Trial Set to order. Estimates quoted upon request. Trial Sets may be had with any of the following details of special construction at an added cost.

The Eureka Mounting represents the highest development in Finger Piece Construction. It is the mounting "par excellence."

The Bridge is made with a wide base accurately fitting the contour of the nose. The same system of numbering is used as with the Sta-So Mountings. The dimensions range from 231 to 295, as follows: 231, *241, 242, *251, *252, 253, *261, *262, *263, *271, *272, *273, 274, 281, *282, *283, *284, 293, 294 and 295. Numbers preceded by a star are those used in Eureka Fitting Sets.

The Spring is a departure from the wire coil. It is a band or ribbon of metal, invisible from the front, and will do away with breakage. The spring pressure can easily be changed and the entire spring removed without the use of special tools and without disturbing the guard, a feature possessed by no other Finger Piece Mounting.

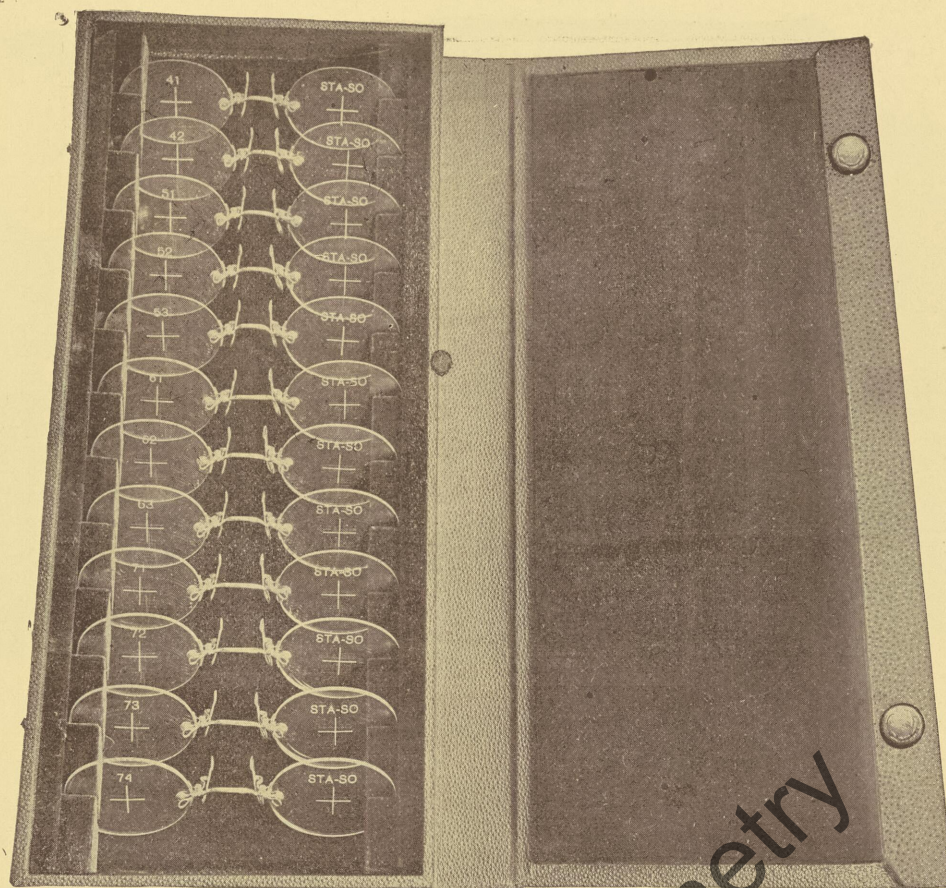

The Guard is of new design, sanitary with zylonite rocking pads at top. It has great sticking qualities due to the rocking pad, which follows and adjusts itself to any movement of the muscles of the brow. Note the large roll to the arm of the guards admitting the maximum amount of adjustment in, out, up or down, while the angle of guard can be changed instantly. There is a greater range of adjustment in the Eureka Guard than any other yet designed. By proper bending the use of inset studs can be avoided in many cases.

The Lens. The dimensions of Finger Piece Mountings are based on using O Eye Size Lenses. OO Eye Lenses add $\frac{1}{16}$ -inch, and OOO Eye Lenses add $\frac{1}{8}$ -inch to the P. D. It is many times advisable to use short oval lenses in connection with Finger Piece Mounting, as you thus obtain a larger lens without adding to the pupillary distance, and can prescribe a mounting of greater width, making it more comfortable for the patient to wear. There are many advantages to the short oval form of lenses, especially for use with reading glasses.

The special features of the Eureka Mounting are protected by patent and will be found on no other mounting. It is the best Eye Glass Mounting yet offered. Get the habit, order the Eureka.

Note. To prescribe Finger Piece Eye Glass Mountings successfully a Fitting Set is required.

Digitized by Illinois College of Optometry

THE STA-SO FINGER PIECE EYE GLASS FITTING SET.

Coil Spring—Rigid Guard

		Price Each
Solid Gold.	Set of 12, as illustrated, in Morocco Case, Velvet Lined.....10K	\$19.00
Gold Filled.	Set of 12, as illustrated, in Morocco Case, Velvet Lined.....1-10th 12K	10.00

The Bridge. When prescribing "Sta-So" Eye Glass Mountings, select from the fitting set the one which most nearly conforms to the contour of the nose, care being taken that a too deep Bridge is not used. The Crest should **lay flat upon the nose**, no space intervening. The number of the Mounting indicates its dimensions; for instance, No. 262 is $\frac{1}{8}$ inch high and $2\frac{3}{8}$ inches P. D. with O Eye Size Lenses. The figure in unit's place expresses the height of Bridge in sixteenths and the figure in tens' place denotes the P. D. in sixteenths in excess of 2 inches. Fitting sets are furnished with assortment as follows, one each—Nos. 241, 251, 252, 261, 262, 263, 271, 272, 273, 274, 282, 283; from these a Bridge will be found that will perfectly fit the patient's nose.

The Guard. The Angle of the Guard may readily be changed on account of the looped arm which connects the body of the Guard with the finger piece. The tension of the Guard if too tight, can be loosened by bending the arms back so as to give a wider spread to Guard, or vice versa.

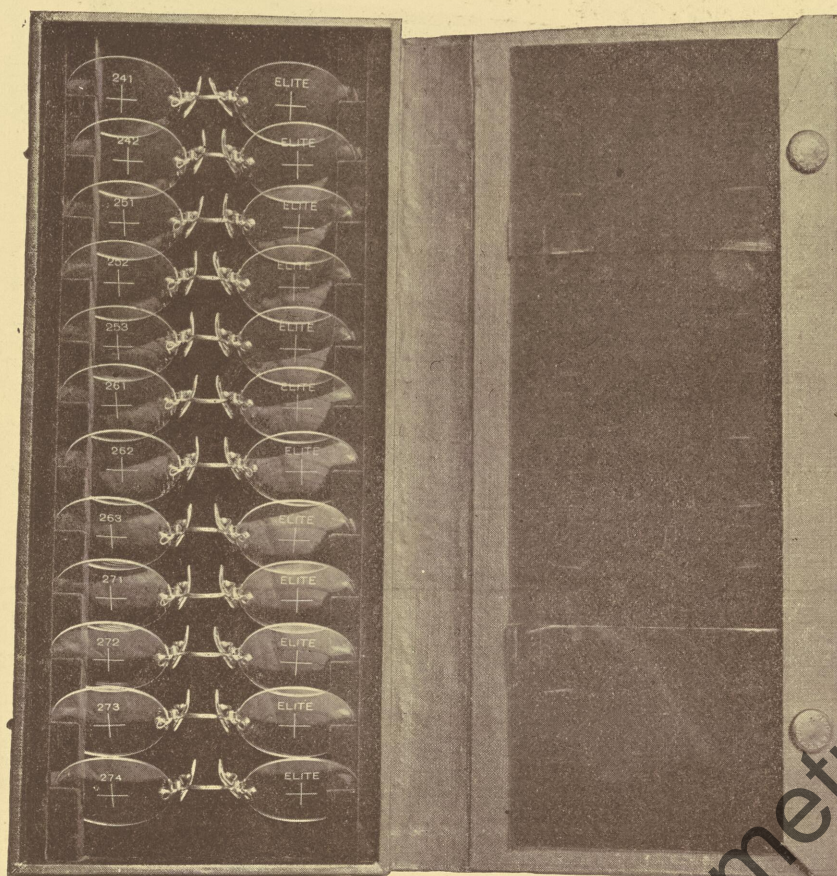

The Stud. The Sta-So Mounting is also made with either Inset, Offset or Drop Studs. Inset Studs sets the lenses away from the eyes to avoid contact with long eye lashes. Offset Studs set the lenses in towards the eyes for use with deep noses. Drop Studs set the lenses lower than regular.

Small and Large Numbers. In addition to the numbers in the Fitting Sets as described above. The Sta-so Mounting is made in No. 231 for small narrow noses, and in Nos. 281, 282, 283, 285, 293, 294, and 295, for extra large noses. No extra charge.

The Lens. Lenses of O Eye Size are used in determining the P. D. OO Eye Lenses would add $\frac{1}{16}$ inch and OOO Eye would add $\frac{1}{8}$ inch to the P. D. If large Lenses are desired without increasing the P. D., specify "short oval." This will decrease the length and increase the width. Or order by millimeters dimensions any size or shape.

Caution. Care should be used to select a Bridge that is not too deep. The Crest should **rest flat upon the nose**, no space intervening.

Note. To prescribe Finger Piece Eye Glass Mountings successfully, a Fitting Set is required.

THE ELITE FINGER PIECE EYE GLASS FITTING SET.

Coil Spring—Rocking Guard

		Price Each
Solid Gold.	Set of 12, as illustrated, in Morocco Case, Velvet Lined.....10K	\$19.00
Gold Filled.	Set of 12, as illustrated, in Morocco Case, Velvet Lined.....1-10th 12K	10.00

To those desiring a Finger Piece Mounting with the "Rocking" Form of Guard, we offer the "Elite." It will with the minimum of adjustment conform to the peculiarities of each case. It is as near "self-adjusting" as it is possible to make any Eye Glass Mounting, and will appeal to those who have had trouble with other styles.

This Mounting is especially desirable where it is necessary to "mail direct to patient," as the Guards require little or no adjustment.

The Elite will be found to be one of the most comfortable Finger Piece Mountings on the market. This is due to the very wide bearing surface on the guard, which prevents its cutting into the flesh of the nose. This mounting is being worn with comfort today by many Eye Glass wearers who have refused other styles. Made with Inset, Offset and Drop Studs when desired.

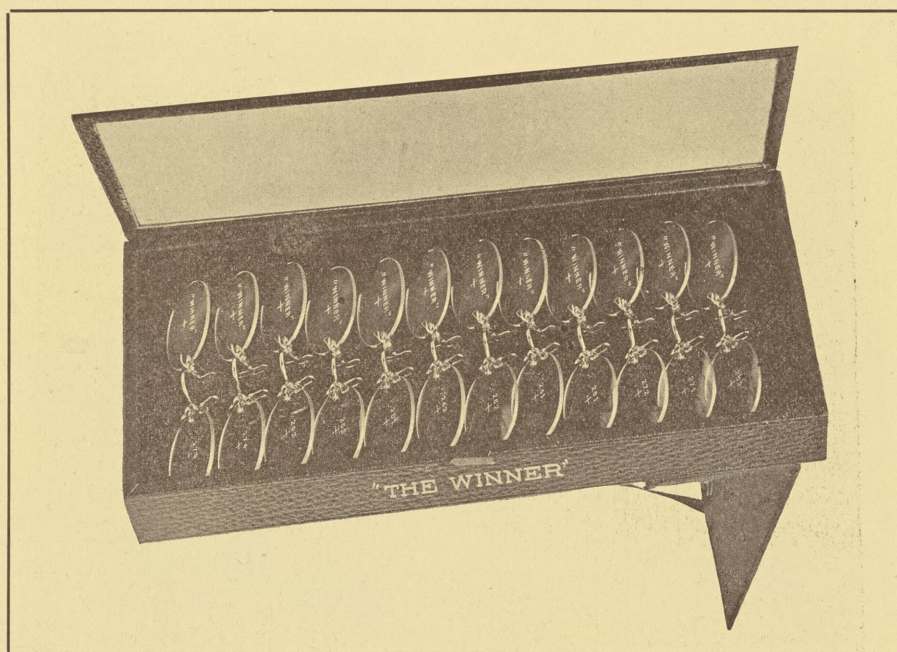

The following table gives the catalogue numbers to be used when ordering "Elite" Mountings. Opposite these numbers will be found the equivalent measurements as regards the Pupillary Distance, height of Bridge and Inclination. This table is based on No. 0 Eye Size. OO Eye Size increases the P. D. $\frac{1}{16}$ inch and OOO Eye Size adds $\frac{1}{8}$ inch.

Catalogue Number	P. D.	Height	Inclination	Catalogue Number	P. D.	Height	Inclination
241	2 4-16	1-16	1-8	262	2 6-16	2-16	1-8
242	2 4-16	2-16	1-8	263	2 6-16	3-16	1-8
251	2 5-16	1-16	1-8	271	2 7-16	1-16	1-8
252	2 5-16	2-16	1-8	272	2 7-16	2-16	1-8
253	2 5-16	3-16	1-8	273	2 7-16	3-16	1-8
261	2 6-16	1-16	1-8	274	2 7-16	4-16	1-8

Caution. Care should be used to select a Bridge that is not too deep. The Crest should rest flat upon the nose, no space intervening.

Note. To prescribe Finger Piece Eye Glass Mountings successfully, a Filling Set is required.

0037..	This Prism Set consists of a special Straight Temple frame with thumb screws, making it possible for the patient to easily change the lenses. It is possible to get any strength of prism desired from 6° to 36° that can be made by combining the prisms, 6°, 8°, 10°, 16°, and 20°, one lens of each number being contained in the set. It is invaluable for muscle exercise at the patient's home. Complete with instruction
	\$4.00

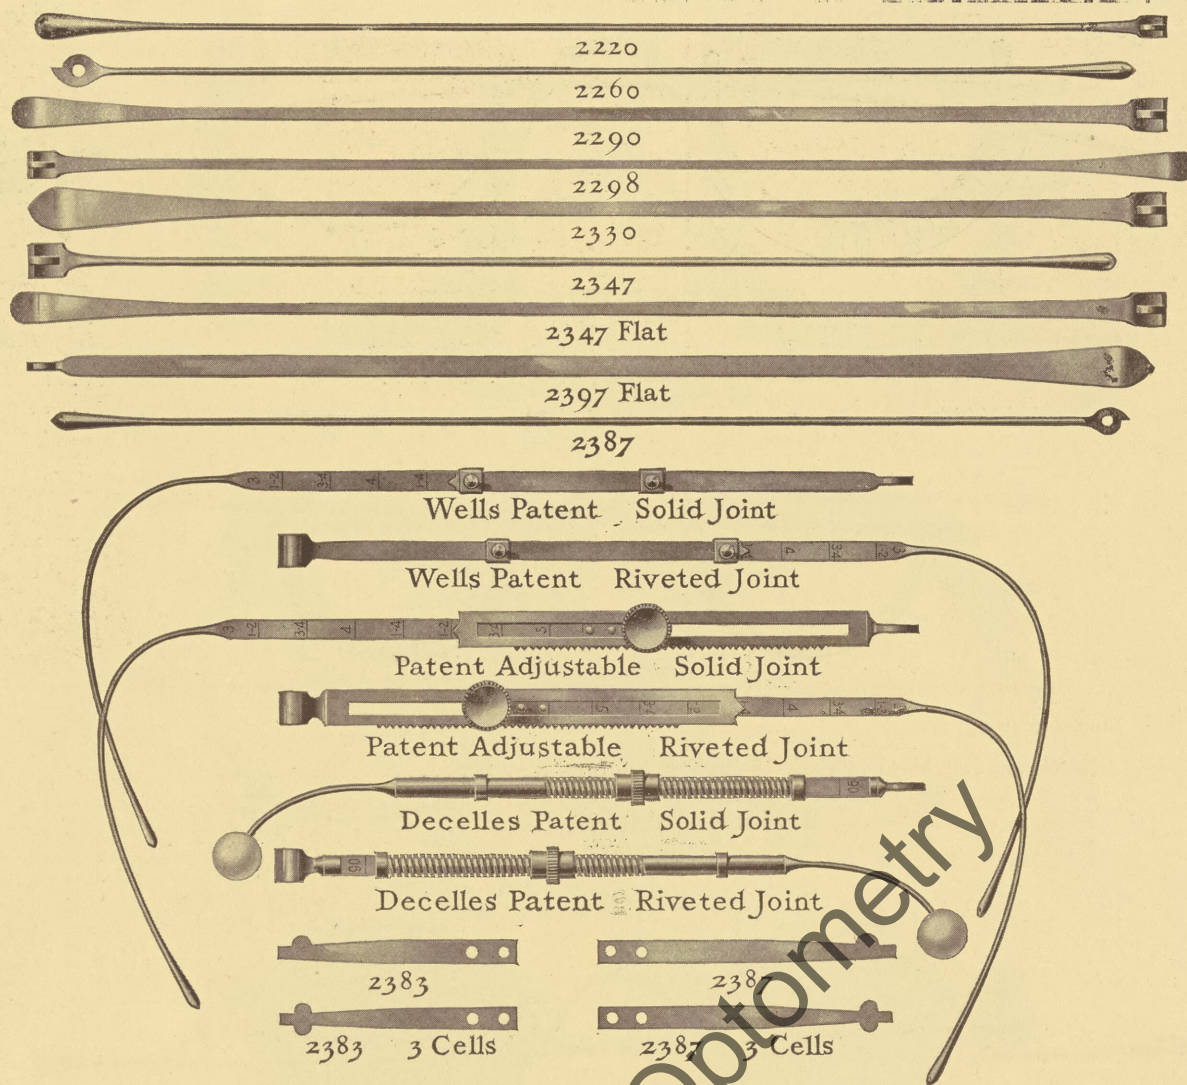

PRISM EXERCISE SET

This set is composed of five prisms 6°, 8°, 10°, 16°, 20°. To insert prism in frame loosen thumb screw place in prism base thick part out, apex thin part in. Insert the beveled edge in the frame with the thick portion of lens extending outside of frame away from eye.

To produce 6° prism place 6° in either eye base out.
 To produce 8° prism place 8° in either eye base out.
 To produce 10° prism place 10° in either eye base out.
 To produce 16° prism place 16° in one eye base out, 6° in other eye base out.
 To produce 20° prism place 20° in one eye base out, 10° in other eye base out.
 To produce 36° prism place 36° in one eye base out, 16° in other eye base out.

It makes no difference which eye the stronger prism is in or whether prism is over one or both eyes as long as base is out.

HOLMGREN COLOR TEST.

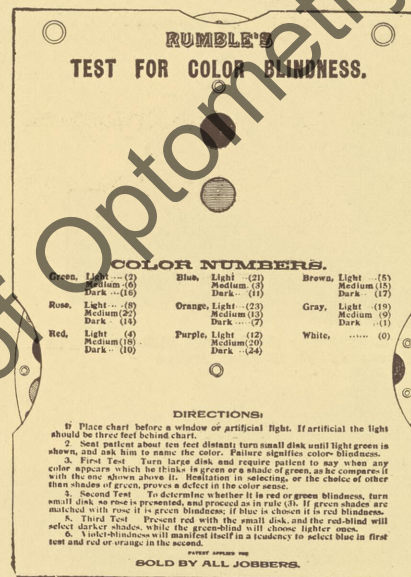

This set of worsteds consists of skeins as prescribed by Professor Holmgren, with metal tags attached as suggested by Dr. Wm. Thompson. The metal tags are numbered in such a way that odd numbers denote matched skeins and even numbers confusion skeins. The skeins for 1 to 20 correspond to Holmgren's first test, and consists of various shades and tints of green alternating with confusion colors—grays, tans, light browns, etc. The second series, from 21 to 30, is composed of lighter and darker shades of rose alternating with blues, etc. The third series, from 31 to 40, is made up of reds alternating with browns, sages and dark olives.

No. 70..Holmgren's set of colored worsteds, complete, with directions in box, per set.....\$2.50

TRANSLUCENT TEST TYPE.

In Neat Black Frames

It must be conceded that by diffused light a more even and nearer perfect illumination of test-type may be attained than by a system of reflected light. By the use of type on a translucent background, with the source of illumination behind, a perfect diffusion of light may be gained. Recognizing the importance of this fact and appreciating the demand for perfect and accurate test-types we have, after careful study and at great expense, revised our translucent test-types, and are now able to present type carefully arranged and scientifically figured. Only such letters as will subtend an angle of five minutes in width and five minutes in height are used. These are all standard for the distance designated, being based on a visual angle of one minute. All letters are of the accepted standard Snellen outline, and attention has been given to the phonetic arrangement. Each line is numbered to the right (see illustration) as an aid by which the attention of the patient may be directed to a certain line of the set. The types are

968 C

figured in the metric system and the exact equivalents in English feet are given. By using the more practical metric system we are able to figure the intervals in progression, each bearing a fixed relation to the 6-meter line (normal vision); so standardizing the intervals by a simple rule which we feel sure will gain the indorsement of all. The 6 M., or 19.7 feet line indicating normal vision, is taken as a unit of one, and by making the intervals as tabulated, each line may be expressed in tenths of the normal. The vision of a patient reading the 10 M. line at 6 M. distance would be indicated as 6-10ths of normal; the 12 M. line at 6 M. would be 5-10ths; the 60 M. line at 6 M. would be 1-10th, and so on. Vision more acute than normal would be indicated by +. For example, if the five M. line can be read at 6 M., the visual acuity would be normal + 2-10.

These test types are of open glass, with the letters and figures etched in and colored black. They may be washed and kept clean, and always present the same dead white background, and do not become indistinct with age, as is the case with paper test-type.

The following table explains fully the system proposed:

Vision at 6 M Distance	Distance in Meters	Distance in Feet
1-10	60	196.8
2-10	30	98.4
3-10	20	65.6
4-10	15	49.2
5-10	12	39.4
6-10	10	32.8
8-10	7.50	24.6
1	6	19.7
+ 2-10	5	16.4
+ 5-10	4	13.1
+ 10-10	3	9.8

No. 990—School Chart

This Chart is designed especially for use in schools, and is made with three joints so that it may be folded up and contained in a heavy manilla envelope. Upon this envelope is printed complete instructions for use, also indicating the various symptoms of eye troubles, and a description of the most common errors of refraction. The object is to interest the teacher and to instruct her so that she may detect the existence of eye troubles and call them to the attention of the parents. The chart being contained in an envelope when not in use, keeps it clean, and prevents the child from memorizing the letters. When desired we print our customers name and address upon the chart in red ink.

ROGERS TEST CABINET.

This Cabinet solves the problem of how to properly illuminate the test card and at the same time have only as many lines illuminated at a time as desired. Many times when the complete card is illuminated the patient becomes confused and does not know which line to read. Connected to the Cabinet by a flexible cable of any desired length is a switchboard, which controls the lights for the various lines and tests. Any one or all of the openings can be illuminated when desired.

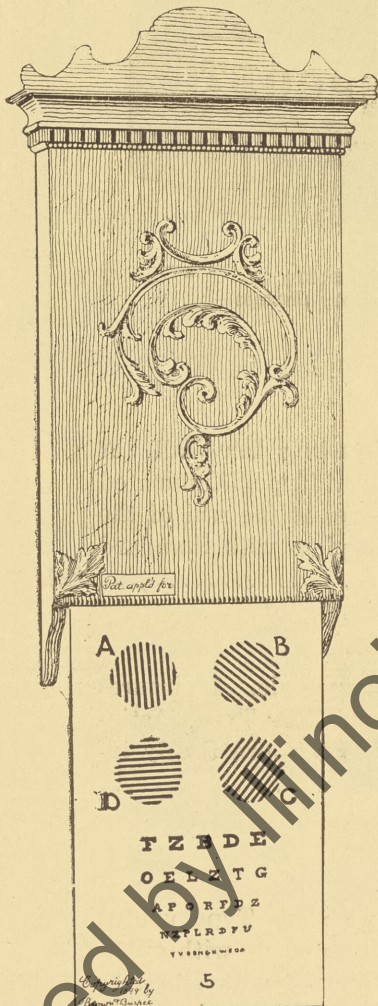

The six smaller openings have duplicate lines of type which can be instantly dropped in or out of position when desired. Behind the iris diaphragm is a white light for muscle test, also a slide with red and green glass for railroad signal tests.

The primary test in the upper left hand corner, enables the examiner to find the acuity of vision. After that is found the proper line of type on the right can be illuminated for the completion of the test. The Rogers Cabinet is the most complete and striking office fixture on the market. Made of Oak, Natural finish if desired or in dull black. Size 30 inches by 29 inches.

Price complete with electric lights switchboard and all connections, each \$60.00 net.

901. The Lewis Eye Chart is the most beautiful and instructive chart of its kind yet offered. It enables the refractionist to demonstrate clearly to his patient just what must be done to relieve his or her ailment. Both eyes, with their appendages are accurately portrayed, with the optic nerve, muscles and bony structure, beautifully lithographed on heavy paper, in six colors. Designed by J. J. Lewis of the Northern Illinois School of Ophthalmology. Measures 18x23 inches and frames 28x33 inches. Price each.....\$0.75

Lewis Eye Chart**Note.**

The cost of sending any of the above charts separately by prepaid express is 15 cents each.

NEW MODEL COMBINED OPHTHALMOSCOPE AND RETINOSCOPE.

As an Ophthalmoscope it gives a very distinct detailed view of the retina, magnified fourteen diameters. Focusing and seeing with the new instrument are as simple as using Opera Glasses, and if desired the operator can show to another person any peculiarity in the interior of the eye. To make an examination it is not necessary to subject patient and examiner to the unpleasantness of a dark room; neither is it necessary that the examiner be accustomed to working with an Ophthalmoscope to realize satisfactory results.

As a Retinoscope this instrument can be operated without a dark room and requires only a few moments to obtain absolutely accurate results, because:

1. The working distance is fixed.
2. The correcting lenses are brought before the eye in a natural way, preventing disturbing spasmic contraction of the ciliary muscles.
3. The mirror is accurately ground and always presents the same angle to the patient's eye.
4. The axis is precisely indicated on a dial in constant and full view of the examiner.
5. The definition between the shadow and reflex is very sharp and clear cut.
6. The patient's eye, the light and the mirror are always in perfect alignment.

The instrument is instantly changed from Ophthalmoscope to Retinoscope, or vice-versa, without the addition or removal of extra parts.

	Price Each

THE SUTCLIFFE KERATOMETER.

One Mire—One Position—One Absolute Focus.

The Keratometer is radically different from the Ophthalmometer in optical principals and design and has removed all the uncertainties in making exact measures of the Cornea.

The first departure of importance is that the Keratometer has but one mire, made in the form of a circle with four projecting hooks.

By means of the Instrument this image or mire is tripled, and represents both the primary and secondary positions. In other words it is not necessary to revolve the mires from the primary to the secondary position with the errors that many times attend this proceeding as both positions are shown in one view.

The Keratometer

With the Keratometer the operator has before him a diagrammatic picture of the Cornea, showing both meridians, thus obviating the necessity for two observations made at two different times and depending for their accuracy upon the absolute immobility of the subject. In making an examination with an Ophthalmometer it is absolutely necessary that the patient remain immovable. The slightest movement while the instrument is being changed from primary to secondary position will destroy the accuracy of its findings.

The Keratometer has one position only and from it you read accurate results. Mechanically it is well and substantially made and nicely finished. None of the moving parts are visible to the patient. This tendency to cause the patient to move his eye is thus removed.

The Dial From Which the Result is Read

The Sutcliffe Keratometer fitted with Electric Lights,
any Voltage or System.....\$100.00

Price Each

Descriptive Booklet will be sent upon request.

Note—The Keratometer may be operated by the use of Electric Batteries. Correspondence Solicited.

THE 20TH CENTURY OPHTHALMOMETER.

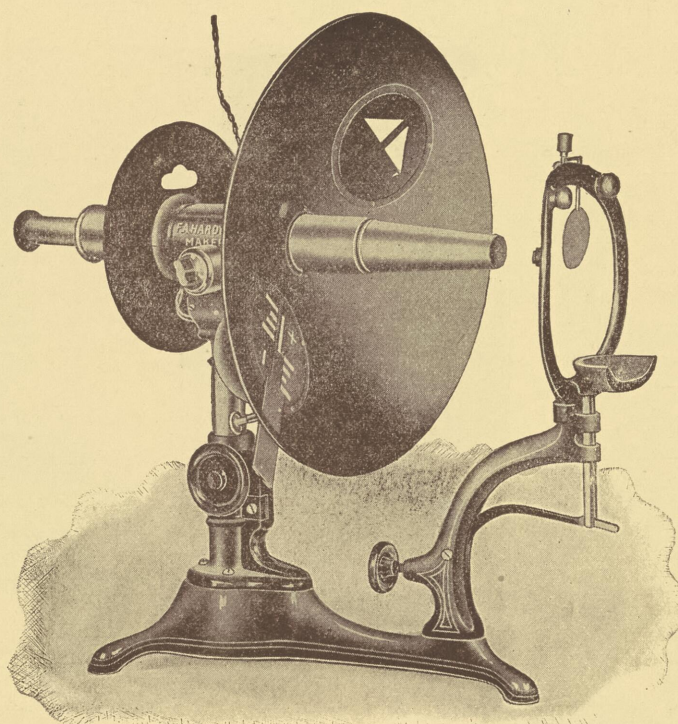

Luminous Mires.

The Ophthalmometer gives positive information as to the amount and axis of corneal astigmatism, by an objective test uninfluenced by the patient.

It expedites the diagnosis of the refraction of the eye; gives accurate information of the axis of the astigmatism and when used with other recognized tests, it saves the danger of errors. It creates a favorable impression with the patient and will pay for itself in increase of practice and certainty of work. In ordering give System and Voltage of Electric Current used in your city.

MEDIAOMETER.

The Mediaometer is a Scientific Optical Instrument that readily detects and technically diagnoses all refractive errors of the Dioptric Media; accurately indicating the Axis and Foci of any Corneal or Lenticular Astigmatism, the principle employed being commonly known as the "Fogging System," or "Putting the Eye at Rest," that is universally acknowledged to be the most practical and successful method used in general refractive work. It is especially advantageous when dealing with low degrees of Astigmatism and Hyperopia, giving the amount of latent correction that can be worn with comfort and the best physiological results.

A descriptive booklet illustrating the different styles and accessories and complete price list, sent upon request.

Illustrating the Instrument For Use in Objective Test

THE OCULOMETROSCOPE.

Saves time, labor and expense. Time saving because patient does not have to move during the entire examination. Labor saving as the trial lenses are on the instrument. No taking out and putting in trial lenses. Saves expense as it does away with the necessity of the Trial Case. **Subjectively**; does away with trial frame and trial case. A twist of the hand and any lens combination is quickly brought before the patient's eyes. **Objectively**; makes retinoscopy more simple and accurate, either dynamic or static.

Price Each

The Oculometroscope, Complete.....\$85.00

For Gymnastic Treatment of the
Intrinsic Muscles of the Eyes

THE KRATOMETER

The Kratometer is an instrument made for diagnosing muscular anomalies as well as treating all the abnormal conditions.

The instrument is made with an adjustable base and pupillary distance. Lenses for exercising can be manipulated before the eyes at regular intervals, smoothly and at right axes. The apertures through which the patient looks are small so that the head cannot get out of primary position.

With this instrument the vertical and the external recti can be disciplined as well as the interni.

The exercising prisms range from $\frac{1}{4}^{\circ}$ to 60° combined strength. To 4° by quarters (this is a feature no other instrument has and very important when exercising the vertical muscles.)

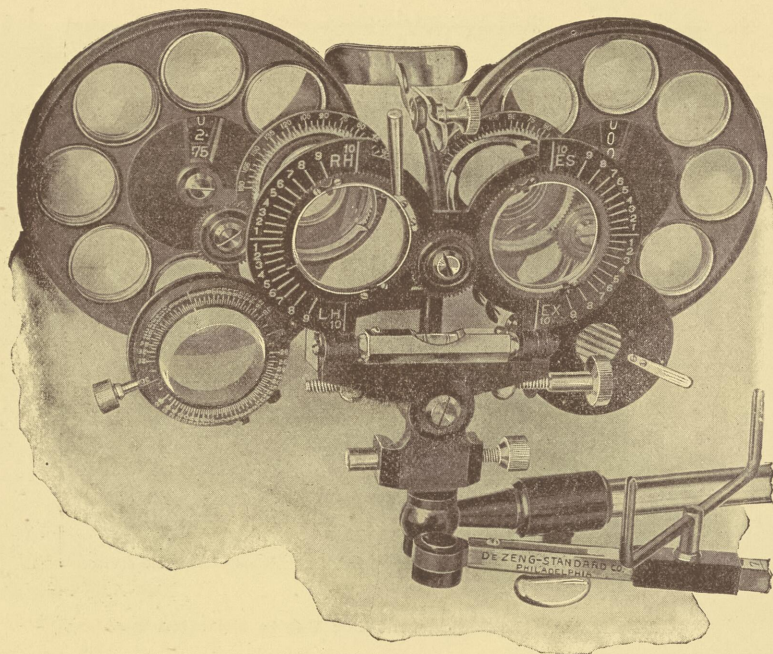

Pamphlet and further information upon request.

Price Each

Kratometer Complete, in Leather Case.....\$60.00

For Tables, Chairs and Stools, see Pages 201-203.

OMAHA OPTICAL COMPANY

DE ZENG'S COMBINED OPTOMETER AND PHOROMETER.

For Objective or Subjective Refraction, Muscle Testing and Muscle Exercise.

This instrument is a perfect combination of the Improved Phoro-Optometer, already described, with a binocular series of rotary disks carrying both plus and minus spherical lenses as shown. There are four disks on either side, all being mounted in compact alignment. Each is provided with a positive spring stop for bringing the lenses into exact operative position as required.

For rapid and accurate work this instrument meets the requirements exactly, for it contains an enormous range of standard focal equivalents, any one of which can be obtained in an instant. It is exceptionally valuable for Retinoscopy and for Muscle Testing; also for Muscle Exercise when equipped with two Risley Rotary Prisms. The lenses in the revolving disks are all one inch in diameter, are accurately ground and centered, and may be brought into operative position separately or in combination as desired. The instrument is furnished complete with either Wall Bracket, Floor Stand or Chair Fixture, as desired.

No. D545....	De Zeng Combined Optometer and Phorometer complete with Trial Frame, Phorometer, Risley Prism on right side, Maddox Rod on left side, Graduated Near Point Test, Binocular Quadruple Series of Rotary Disks containing both plus and minus spherical lenses, with either Wall Bracket, Floor Stand or Chair Fixture.....	\$100.00

Note—An additional Maddox Rod will be mounted to the above instrument for use in detecting Cyclophoria, at an additional cost of..... 5.00

The eight lens carrying disks as already described can be attached to any of the Improved Phoro-Optometers now in use, also to all similar instruments of other manufacture than our own, at a cost of.. 50.00

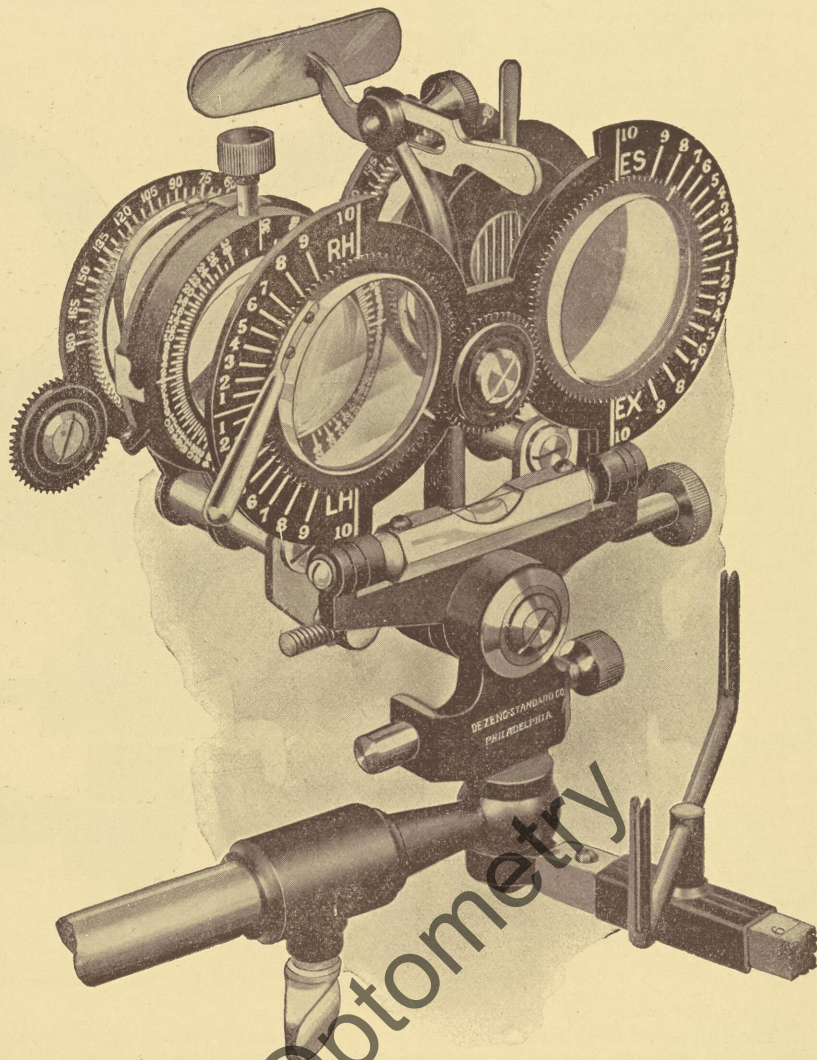

Send for Full Descriptive Circular.

For Tables, Chairs and Stools, see Pages 201-203.

PHORO-OPTOMETER.

This important instrument is a unique combination of the Revolving Three Cell Gear Driven Trial Frame, the Risley Double Rotary Prism of 30 Degrees, the Multiple Red Maddox Rod, the Stevens Phorometer with spirit level and a graduated adjustable near point test, also arranged as to be used separately, or collectively, as desired.

In point of accuracy, completeness, design and finish, this instrument stands alone in its class. It is very compact, light and rigid and is regularly made for the use of $1\frac{1}{2}$ inch trial lenses, but can be adapted to hold $1\frac{1}{4}$ inch when desired. The instrument is furnished with either Floor Stand, Wall Bracket or Chair Bracket, at the same price, each having coarse and fine adjustments and our new friction locking attachment for the prevention of shake.

Stero-Meter

THE STEREO-METER.

The Stereo-Meter is a simple and convenient instrument for diagnosing Hypermetropia, Myopia and Presbyopia, while in the hands of the well informed Refractionist it will successfully indicate the degree and axis of astigmatism.

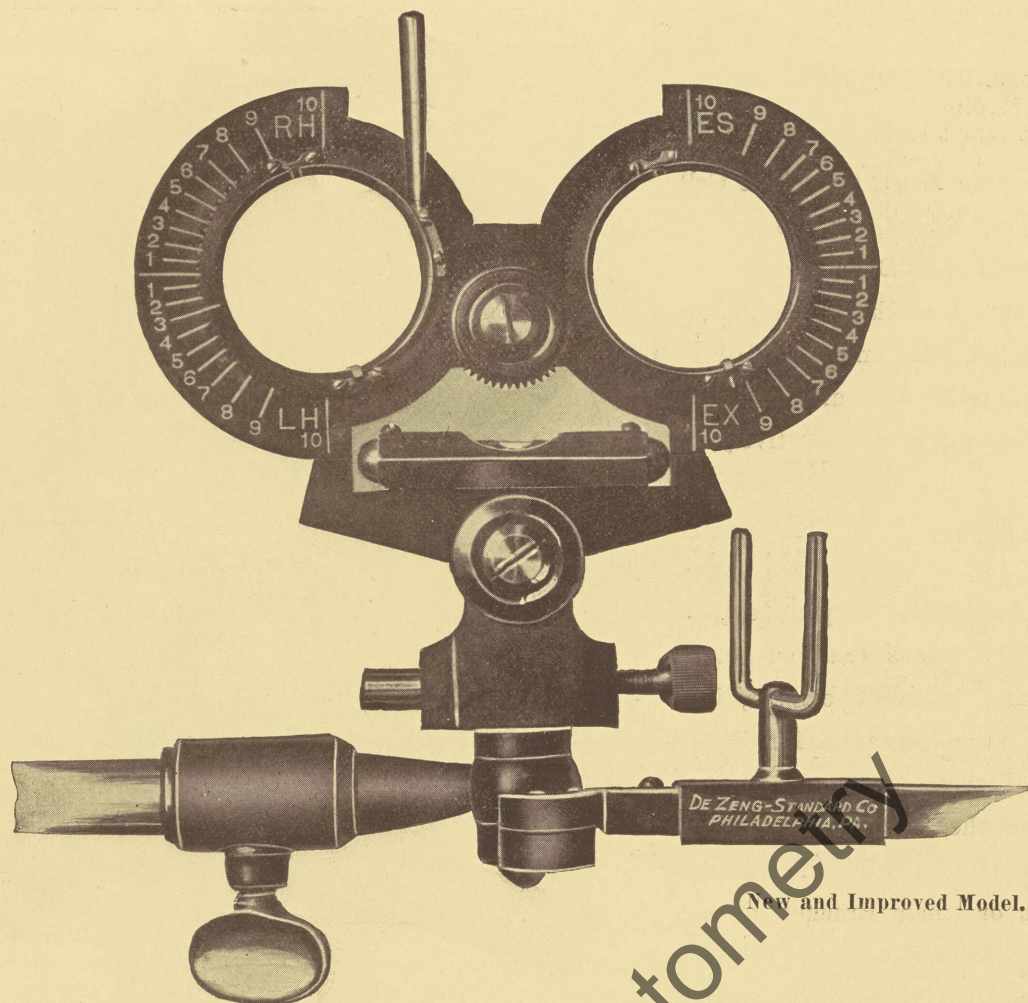

The instrument is intended to meet the requirements of those who cannot afford a more expensive outfit. It is worthy of investigation, as the results obtained are quite satisfactory.

The Stero-Meter, as illustrated, price each.....\$12.50

For Tables, Chairs and Stools, see Pages 201-203.

OMAHA OPTICAL COMPANY

STEPHENS PHOROMETER

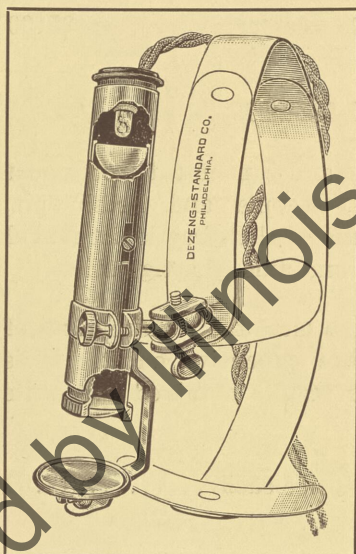

New and Improved Model.

The Improved Stephens' Phorometer contains many advantageous features not found elsewhere. It is provided with an adjustment whereby it can be revolved completely about its vertical axis, and any parallel position can be quickly obtained thereby. Auxiliary clips are provided for holding additional prisms or other accessories before either eye when desired. The lenses are permanently held by metal fastenings, and cannot come out of their cells. It is provided with our latest adjustment for leveling, and a fixture for taking on our graduated near point test. For all-around muscle work the near-point is very important, for with it the test object can be accurately held at any angle for making measurements accordingly. The near point test is not supplied unless ordered.

531.....Same as No. 530, with near point test added, price each	32.50

DeZeng's Electric Headlight

Unequaled for Intense Uniform Illumination.

This improved form of physician's Head Light contains the optical and electrical essentials of a perfect instrument.

It gives a sharp defined circle spot of white light free from any disturbances, which can be varied in diameter from about 3 to 1½ inches at the usual working distance, by adjustment of the front lens, the intensity of illumination being likewise increased or diminished thereby.

The instrument is mounted on a ball joint, also the reflector, and the surgeon can quickly adjust one or both to the required position on head, or direction of the illumination. For general use the reflector should be stationed between the eyes, close to the top of the nose. This permits the free and unobstructed use of both eyes at all times, and gives a splendid direct illumination. For looking into small apertures the reflector should be placed just above the preferred eye and the observation made directly beneath its lower edge. In this position a perfect view can be had at the bottom of the smallest opening.

This Head Light contains a fine compound system of lenses, which are adjustably mounted. It is lighted by a miniature electric lamp of 5½ volts and about one-half ampere, although lamps of higher voltage may be used, the socket being arranged for standard lamp base. It has full nickel finish, six feet of silk cords and two lamps, and can be attached to almost any head band in use.

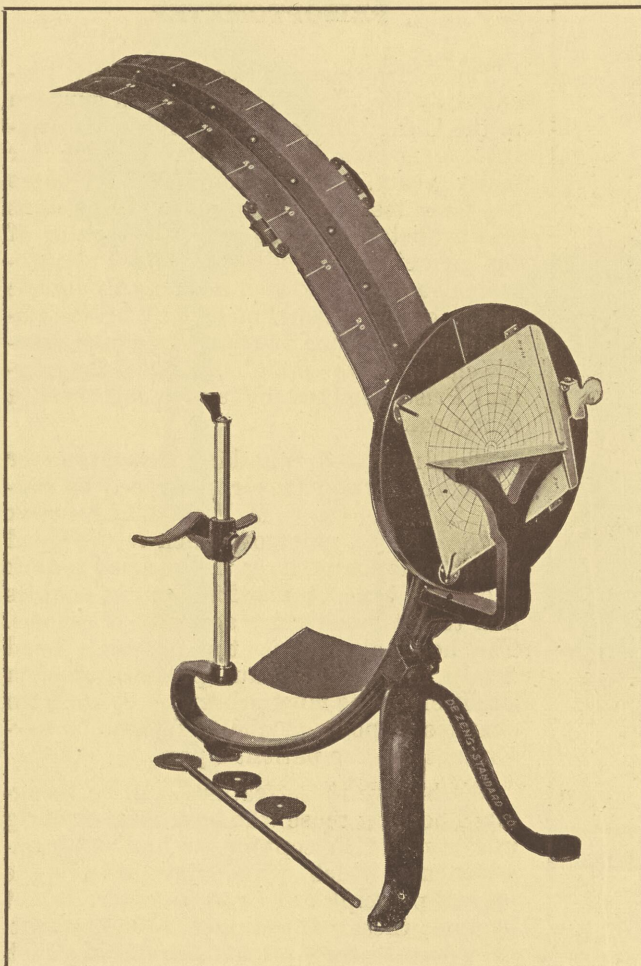

While the best results are obtained with a full reflector, as shown, it can be had with a slight opening if desired, without extra charge.

In addition to being a perfect Head Light this is a splendid illuminator for eye operations when adjusted in reverse position upon the head of the patient.

Stock Number	Price Each
1000.....Complete, with head band, cords and two lamps.....	\$15.00
1010.....Same as No. 1000, without head band	13.50

The accessories for supplying the electric current are extra.

For Tables, Chairs and Stools, see Pages 201-203.

DE ZENG STANDARD PERIMETER.

New Model, One-Piece Frame.

The De Zeng Standard Perimeter combines the valuable points of the Landolt and Priestly Smith Perimeters, having the broad metal arc, the revolving chart holder, and sight hole through the center of rotation. It has a double adjustable chin rest and clip for determining the fixation point. The chart moves with the rotation of the arc and is located just back of a stationary scale, which is graduated to correspond with the markings on the arc. By means of this scale, the exact position of the test object is quickly recorded by pricking the chart with the point of a needle or sharp lead pencil. The graduations on the arc and scale make is very easy to puncture the chart correctly for record at all times. The object carrier has a spring clip for holding the different colors, and is mounted on a new four-wheel spring truck of our own design, which rolls smoothly along on the edges of the arc.

The frame of this perimeter, with the exception of the legs, is all one piece, and nothing short of breakage can possibly impair its accuracy or derange its parts. It has rubber feet, is light, well balanced, and beautifully finished, and is a splendid instrument. A holder and three separate disks of 5 mm. aperture, containing white, red, green, blue, and yellow, accompany it, also 25 charts each, right and left.

NEW THORINGTON AXONOMETER.

Is plainly seen in the dark-room.

This new Axonometer is made of two thin metal discs riveted permanently together after being perforated—one at the center only, the other at center and sides as indicated by the double pointer. Into the arrow-shaped recesses formed by the lateral perforation of the front disc, two celluloid arrow punchings are forced and secured, producing thereby a permanent inlay flush with the face of the disc. The metal parts all being finished in dead black, the broad white pointers make the striking contrast sought for in a perfect axonometer. The central opening is the regulation size, being one centimeter in diameter.

The edge is milled obliquely which novel feature contributes to the ease with which it can be rotated in the cell of the trial frame. All parts are waterproof, and the instrument can be cleansed at any time.

Being light and finely finished, it is unquestionably the best and most satisfactory axonometer ever produced. It is made in 1½-inch size only.

Axonometer.	560.....As Illustrated.	Net \$1.00

OMAHA OPTICAL COMPANY

PRISOPTOMETER

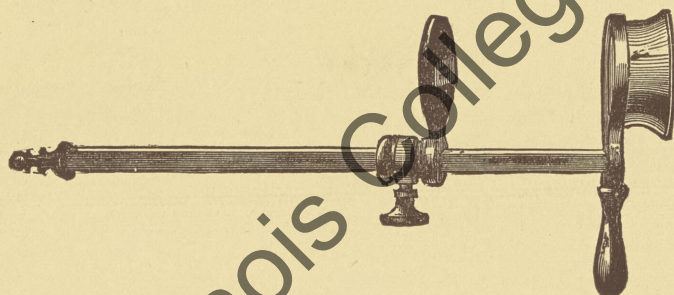

PRISOPTOMETER.

The Prisoptometer was originally patented by Dr. H. C. Culbertson, a surgeon in the United States army, and in its original form has been in the market for many years. Its thorough effectiveness has been tested by thousands of opticians and oculists the world over. The value of the principle embodied in the Prisoptometer has been attested not only by its use in the original instrument, but by its embodiment in other instruments which, having embodied the main features of the original Prisoptometer, have also met with a ready sale.

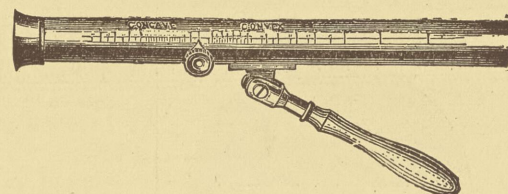

The Improved Standard Prisoptometer embodies certain features covered by patents issued to Dr. F. M. Bishop, of Newark Valley, N. Y., chief of which is the hood which practically gives the optician a dark room for his examination and so enables him to get much more accurate diagnosis. The hood also keeps the patient's head firmly in position, thus preventing such slight errors as must otherwise occur from changes in position due to fatigue or nervousness on the patient's part.

We believe these features will be recognized both by those who have used the original style of Prisoptometer and other instruments, which, while they embody the optical principles of Prisoptometer, do not provide these exceedingly valuable features, and to the optician purchasing such an instrument for the first time, the advantage of these features is obvious without other argument. Descriptive booklet upon request.

No. 275—Regular Electric Retinoscope

No. 277—Special Electric Retinoscope

No. 150—Regular Electric Ophthalmoscope

DE ZENG ELECTRIC RETINOSCOPES.

No. 275 Regular Electric Retinoscope. Has Thornton plano mirror, extension light tube, automatic circuit breaker, handle with cords attached and miniature carbon lamp with hairpin filament. In this retinoscope the mirror angle is reduced and the current automatically cut off when not in use. The light tube is fully extended in practice but may be depressed close to the handle for carrying. The circuit breaker is conveniently located for the thumb of the operator and greatly preserves both lamp and battery.

No. 277 Special Electric Retinoscope. Has Thornton plano mirror, hairpin filament carbon lamp and hard rubber handle with cords attached. This retinoscope like No. 275 is designed for use in connection with independent lighting means, such as office batteries, controllers, etc., and is a popular instrument.

Stock Number	Price Each
275....De Zeng Regular Electric Retinoscope, as described above, complete in Case, with two Carbon Lamps....	\$15.00

277....De Zeng Special Electric Retinoscope, as described above, complete in Case, with two Carbon Lamps....	12.50

Note—For Storage Batteries see Page 198.

DE ZENG ELECTRIC OPHTHALMOSCOPES.

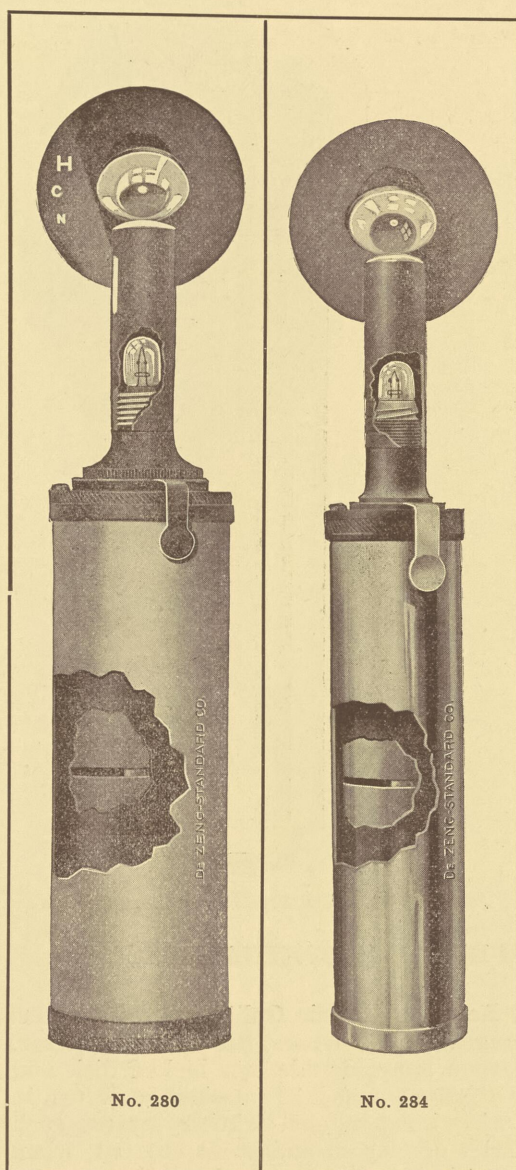

No. 150 Regular Electric Ophthalmoscope. Has Loring arrangement of lenses, full round mirror, miniature carbon lamp, double lens locked disk and handle with cords attached. Is designed for use in connection with independent lighting means, such as dry batteries or city incandescent current, when reduced by a suitable rheostat or controller.

No. 158 Special Electric Ophthalmoscope. Has Loring arrangement of lenses, anti-reflex mirror, universal light adjustment, double lens locked disk, tungsten miniature lamp and Jumbo handle battery with automatic current control. This is the only Ophthalmoscope embodying the many commanding features above enumerated. The mirror eliminates reflexes from the wall of the peep aperture and places the line of observation completely within the shadow. The upper portion is adjustably fitted to the handle and the light can therefore be varied as required. The handle is made of aluminum, has automatic circuit breaker and contains a powerful dry battery of two cells.

Stock Number	Price Each

THE DE ZENG LUMINOUS INSTRUMENTS.

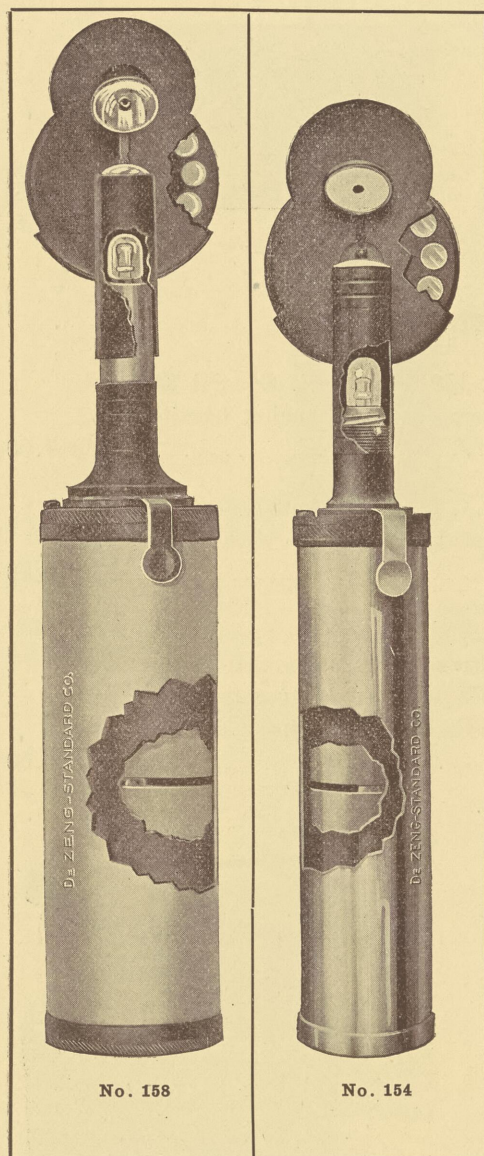

The adoption of the Electric Lamp to the Retinoscope and Ophthalmoscope marked a notable development of these Instruments. The addition of the Crampton Magazine Handle makes a most practical method of installing the battery within the handle of the Instrument which is lighted by a $2\frac{1}{2}$ volt Tungsten Lamp. Owing to the intense brilliancy of the Tungsten Lamp and its exceedingly small current consumption an enormous reduction in battery bulk has been made possible and the small two-cell dry battery now employed gives a splendid light, and the whole outfit can be carried in the vest pocket. The lamp and battery being in exact electrical balance one with the other, a normal illumination is obtained with comparative safety and the necessity of lamp replacement is thereby reduced to the minimum. Carrying their own source of light these Instruments are therefore independent and can be used in almost any place or position.

The Jumbo Handle Battery.—(No. 280) is designed to meet the demand for a very compact and portable instrument of maximum endurance. It is made of Aluminum and designed to hold a two-cell battery of regular stock size obtainable anywhere. It is arranged for either a touch or a fixed contact. This handle is 5 inches long by 1 7-16 inches in diameter and weighs 10 ounces.

The Standard Handle Battery.—(No. 284) is somewhat smaller than the Jumble Handle Battery, being 1 1/2 inches in diameter by 4 1/4 inches long and weighs seven ounces. This handle gives excellent results; it contains a two-cell battery of standard size and has the same form of circuit breaker as the Jumbo.

Illuminated Fixation Letters.—Those employing the dynamic system of Skioskopy will find these Illuminated Fixation Letters very advantageous. They are manifested in the dark room by a divergent band of light from the same miniature lamp which illuminates the mirror.

Tungsten Hairpin Lamp.—Made especially for these Instruments; they have clear globes with a filament of Tungsten drawn wire resembling a Hair Pin in form. They are the ideal lamp for retinoscopy. Descriptive circulars of any of the above instruments will be sent upon request, or we will be pleased to demonstrate them any time at our salesrooms.

DE ZENG STANDARD ELECTRIC OPHTHALMOSCOPES.

154.....	De Zeng's Electric Ophthalmoscope, complete with Standard Handle Battery and a Tungsten Lamp	\$15.00

955 Set....	Same as No. 950, with the addition of Hard Rubber Handle, having cords attached and a Carbon Lamp for each instrument. (With this equipment, connection can be made with other electric accessories, when desired.)	28.80

Extra.....For any of the above sets made up with Standard Handle Battery in place of Jumbo Handle Battery, deduct from price given, complete

Lamps.....Tungsten Lamps for Ophthalmoscope, Retinoscope or Transilluminator, (specify which)....
Carbon Lamps for Ophthalmoscope, Retinoscope or Transilluminator, (specify which)....

Batteries..Extra Batteries for Jumbo Handle.....

These Ophthalmoscopes can be used in either daylight or darkness regardless of place or position. They may be used very close to the eye and no matter what position is assumed the light is always there.

For looking into eyes that have small pupils they are invaluable. Their advantage in the direct method is very great, while for the indirect they are unexcelled.

The Anti-Reflex Mirror is so constructed that its central perforation is fully protected against direct light from the lamp and all annoying reflexes are thus avoided.

Universal Light Adjustment.—By this means the volume and character of light can be varied at will. This is effected by a sliding contact between the head and handle of the instrument. The device is as simple as it is effective.

Double Lens Locked Disk.—Holds all lenses in their cells permanently without pressure. This not only eliminates the possibility of optical distortion, but also of breakage. This important feature is found only in our Instruments.

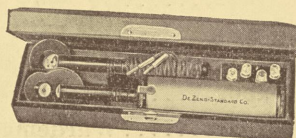

Perfect Illumination is obtained by the nicety of its Optical, Electrical and Mechanical Construction. It offers the highest efficiency at every point.

The Jumbo Handle Battery contains our new compressible contact for electrical control and the batteries are on sale in the open market at 25 cents a set. This handle gives longer life than any other yet offered.

Patent Applied For.

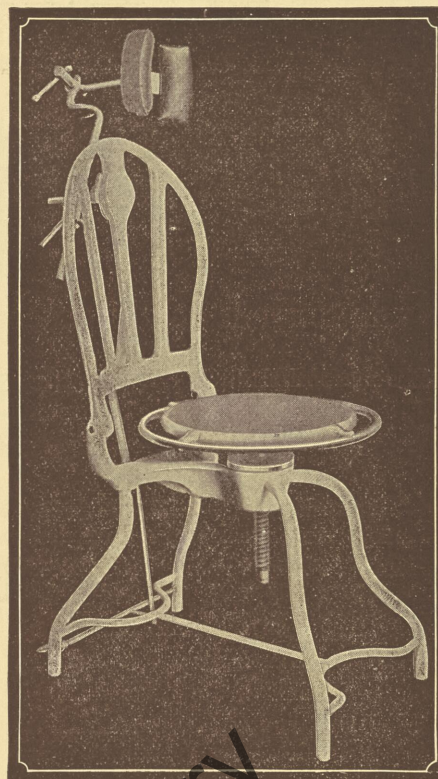

SPECIALISTS CHAIR No. 1275.

For Eye, Ear, Nose and Throat Work

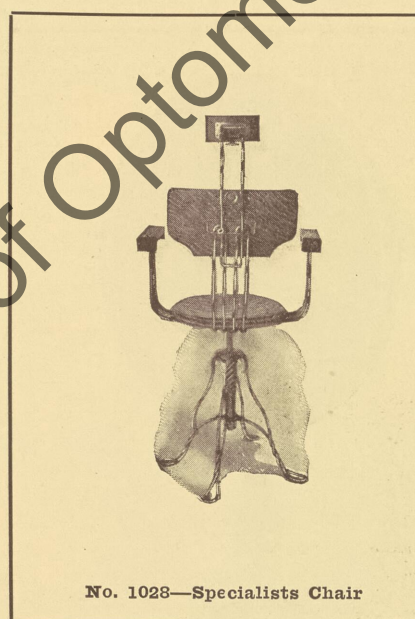

Designed to meet the demands for a Patients Chair for Eye, Ear, Nose and Throat Work. It has all the necessary movements and positions and without the more complicated and superfluous machinery to be found on most chairs for this use.

The Chair is most complete and at the same time inexpensive. The seat is revolving, so the patient may turn without moving the chair, and it is adjustable in height. It has a round rod running around it for the patient to grasp hold of. This does away with arm rests which are generally in the way. The back is adjustable by means of the foot pedals. The head rest can be adjusted up and down, forward and backward and to either side. The Chair is made entirely of metal, is aseptic and practically indestructible. The seat, pedals and head rest parts are nickel plated. The frame of the chair is finished in white enamel. Height of seat ranges from 18 to 24 inches.

Price of No. 1275 Specialists Chair, complete.....\$25.00

No. 1027—Ophthalmic Chair

No. 1028—Specialists Chair

This chair can be raised or lowered by a simple mechanical device operated by the foot and works as easily and smoothly as a hydraulic chair.

Can also be revolved without raising or lowering.

Made of Oak, any finish desired, upholstered in black leather. May also be had in Mahogany finish.

THE SPECIALIST'S ADJUSTABLE BRACKET.

The Specialist's Adjustable Bracket here illustrated has the following points that will speak for themselves if you are in need of an illuminating apparatus:

First—It has an extreme length of five feet in any direction from the place it is fastened, and may be adjusted without the use of set screws, by simply pulling out or shoving back to any desired position, within the radius of five feet.

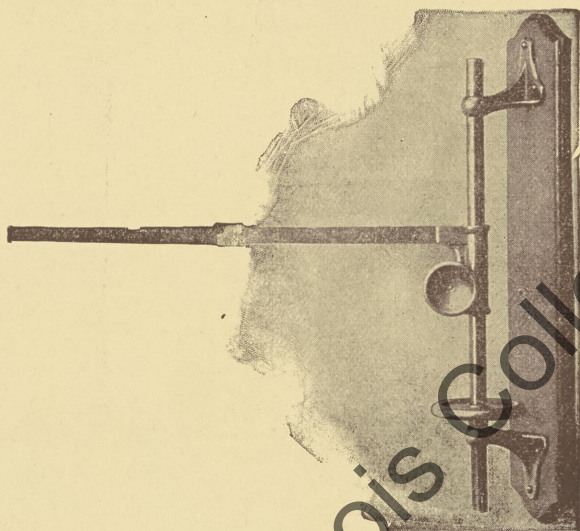

Second—It has an adjustment for raising and lowering of eight inches each above and below the point of fastening, and the burner or globe has a further adjustment either up or down.

Third—It takes up a space of only twelve inches when not in use and folded back against the wall.

We consider that this is by far the best adjustable bracket that there is on the market, and recommend it both because of its general utility for an oculist's use and because of the low price.

Complete—Wired for electricity, with globe, or tubing and Argand burner for gas..... \$8.50

Complete—With Dr. Frank's combination fixture, which permits use of electricity and gas, both lights located on the same horizontal plane..... 10.00

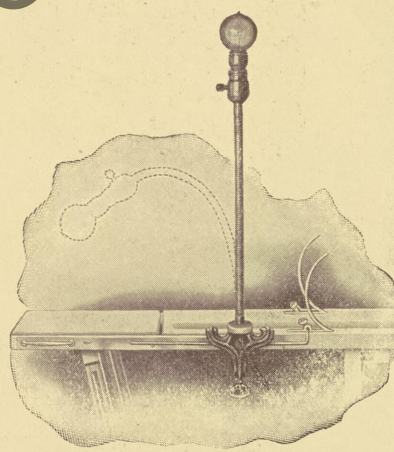

No. 512—Oculist Bracket

No. 512 Oculist Bracket is intended to supplant separate floor stands for the many Instruments in an office, such as Ophthalmometer, Perimeter, etc., and is especially useful for the Trial Case. When not in use the arm is turned alongside the wall, to which the entire bracket is screwed.

SIMPLEX AUTOMATIC RIMLESS EDGE GRINDER.

The Simplex Automatic Rimless Edge Grinder on Iron Stand as illustrated is furnished with a Corundum stone 10x1 inch. The shape of the lens is controlled by a former and the size of the lens is controlled by a graduated wheel, by means of which a change in size can be quickly made. Formers of six different shapes are furnished with the machine. A lens centering device is sent with each machine and it will grind true to axis. The stand occupies 16x18 inches of floor space. Its column is hollow and is used to catch the water used in grinding. Guaranteed to do perfect work.

CLIMAX AUTOMATIC RIMLESS EDGE GRINDER.

The Climax Automatic Rimless Edge Grinder is designed for the heavy work in a Prescription Shop. It will grind from one lens to a pile an inch and one-quarter thick at one and the same time. The base of the stand is 15x26 inches; the Corundum stone is 20x1½ inches. It will grind lenses any regular shape ranging from 34 mm. to 50 mm. of lens length. A patented truing attachment is furnished with each stone. This Edge Grinder is guaranteed to grind true to size, shape and axis and not to flake or chip the edges of lenses when properly operated. It is furnished without motor, but we will quote prices on motor upon application.

Note.—The Climax Edge Grinder may be substituted for the Acme at a reduction of \$5.00.

OMAHA OPTICAL COMPANY

ARTIFICIAL EYES.

We carry a most complete stock of Artificial Eyes, and make a specialty of selecting eyes to samples or according to detailed specifications. Our stock of Eyes is in charge of an expert and when desired his services may be had in fitting a patient. By giving the patient a written order on us, he will receive careful attention and be properly fitted, for which a small additional charge will be made.

To regular customers or parties of approved credit, we will send an assortment of Artificial Eyes on a Memorandum Charge, conditioned upon return to us within 10 days' time. We recommend that selections be made to include both the ordinary Shell Eyes, and the Snellen Reform Eyes, to aid in obtaining exact requirements.

The Snellen Reform Eye has many advantages as compared to the ordinary Shell Eye:

First. The Reform Eye is designed to fit over the stump in the socket; it is much more comfortable, and consequently can be worn longer without irritation.

Second. It is more natural in expression. A much greater movement is gained by means of its full form closed back, which fills the cavity.

Snellen Reform Eyes.

Third. Being constructed with an inside chamber of air, the Reform Eye is more durable, not only from accidental breakage, but from sudden changes of temperature to which the ordinary eye is very sensitive.

Fourth. Owing to the peculiar construction of the Reform Eye, all the sharp edges are dispensed with. This feature will appeal strongly to those who have experienced trouble with the sharp edges on shell eyes.

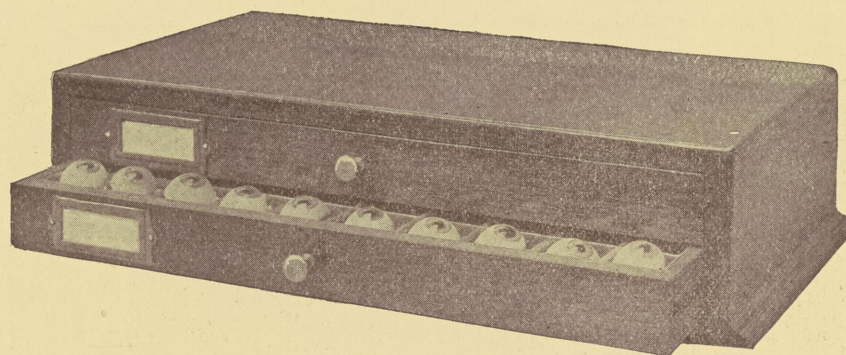

Fifth. The Reform Eye causes much less secretion than the ordinary style, thus preventing accumulation in the cavity, which causes irritation to the conjunctiva.

Prices.

	Price Each
Single Snellen Reform Eyes on selection.....	\$3.00
Single Shell Eyes, on selection	2.00
Refinishing and Polishing old Eyes, at customers risk only	1.00
Grinding Artificial Eyes to size50

Measurement for Width

Measurement for Length and Height

POINTS ON ORDERING ARTIFICIAL EYES.

The notch or concave edge of Right and Left Eyes are intended to be worn up when inserted. It frequently occurs however, that in order to have the eye point properly, and with desired effect, it is necessary to reverse them, using the left eye on right side or vice versa. If possible, a sample should be sent when ordering, pointing out the defects, if any. When sample is not sent, give us the following information:

- 1st. Whether for right or left side.
- 2nd. Color of iris, and whether light, medium or dark shade.
- 3rd. Diameter of iris in millimeters.
- 4th. Should the white of eye be white, blue white, cream or yellowish.
- 5th. Width in millimeters, as per diagram above.
- 6th. Length in millimeters as per diagram above.
- 7th. Height in millimeters as per diagram above.
- 8th. Distance in millimeters from iris to inner point, and from iris to lower edge.

Eyes Made To Order. We are prepared to make to order any special form of Artificial Eye required, thereby insuring a perfect match, and we can always duplicate the eye when required.

OPTICAL LETTERS

OPTICAL LETTERS

This book was written by a man of wide experience in optical circles, who has proved himself to be one of the most successful advertising men in the country. His statements are practical ones, and are not based on theory.

The object of this book is to show you how to write follow-up letters to your old customers, and to prospective customers; how to get them to notice and watch your windows; to come to your store, and get acquainted. Letters that win the customer's confidence; letters that pull. This book tells you how, when you get a customer, to keep him as a permanent one, and inspire him to send you new customers. This book is full of form letters and good ones; it is just what your business lacks. It is the author's intention to help you write letters that will aid you to build up and hold a successful business. We heartily recommend this book. It is worth its weight in gold to any progressive optician who will follow the ideas advanced.

Optical Letters, price each..... \$1.00

MANIKIN OF HUMAN EYE

MANIKIN OF THE HUMAN EYE

The Manikin of the Human Eye is an illustrated book of the eye lithographed in natural colors showing each of the 88 parts of the human eye. It is arranged in parts so that the eye can be dissected and examined. First is shown the different parts of the eye; second, the eye muscles, etc. Each portion is numbered and explained in the book which accompanies this work. A most valuable text book for the study of the anatomy of the eye.

CARD SYSTEM OF RECORDS

Your file of Prescriptions is one of your most valuable assets as it represents the "good will" of your practice. It is therefore important that your prescriptions be carefully filled out, with name, address and date, also that they be filed so as to be quickly accessible. The most thorough and up-to-date method of keeping an accurate record of Prescriptions is by the Card System. Each Prescription has a separate card printed for the purpose and filed alphabetically in the Cabinet. Our Cabinets are constructed from quarter-sawed oak, with fine finish.

Caution about the Use and Selection of Spectacles

"Persons having normal vision will be able to read this print at a distance of 14 inches from the eyes with ease and comfort; also will be able to read it with each eye separately. If unable to do so your eyes are defective and should have immediate attention. When the eyes become tired from reading or sewing, or if the letters look blurred and run together, it is a sure indication that glasses are needed. The lenses sold in the cheap goods are of unequal density and have imperfectly formed surfaces. Continued use of these poorer lenses will result in positive injury from the constant strain upon the muscles of accommodation to supply the defects in the glass."

Made with oval metal back, and glass front. 13 inch diameter. One light inside which flashes on and off. Has Eye on front of ground glass. Lettered like cut, or as you desire. Made to fit any socket. Can be hung on cord in store, or window.

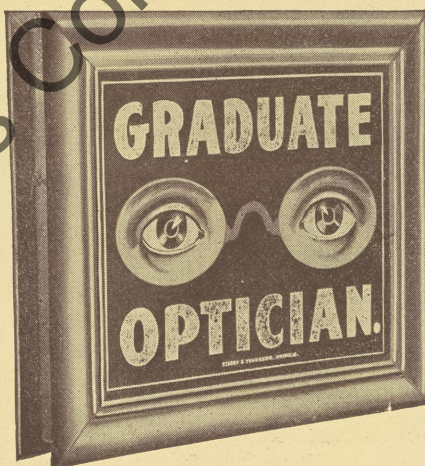

W95—13 inch sign, like cut.\$6.00

**Style A-2
ANY LETTERING DESIRED
"IT WINKS"**

If you want the best sign in your town for opticians here it is. Fitted and made just the same as No. B-2 only it is larger and lettered both above and below the eyes. It measures 42 inches long, 38 inches wide and 6 inches thick. The glass is 34x28 inches and is clear double strength glass. The letters are cut in the black background by an expert sign writer, and stippled with light translucent aluminum paint and well spaced. We can letter both sides the same or different as you wish. This sign can also be wired so that the letters remain illuminated, and do not flash with the eyes at a little extra cost. We have seen cheaper looking signs sell for twice the money we ask. It weighs about 45 pounds.

Price complete ready to hang and connect wires, any voltage or any lettering. F. O. B. Factory, \$20.00. State voltage desired when ordering.

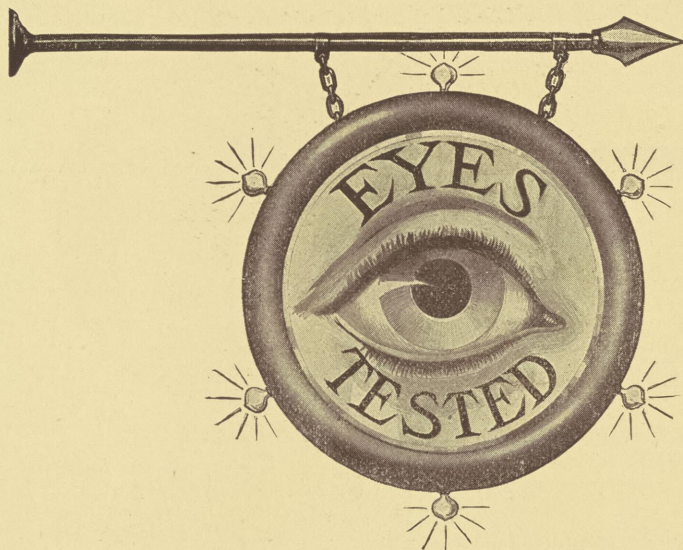

**Style B-3
ANY LETTERING DESIRED
"IT WINKS"**

Our No. A-2 sign is 28x30x6 inches over all. The glass is 20x22 inches and the eye is 18x13 1/2 inches. It is painted two coats of lead and oil inside, and five coats of dead black outside to stand the weather. The eyes are in natural colors and are on the inside of the glass. They show up fine against the black background and are very attractive either at night or day time. It is lettered as desired, either above or below the eyes. The lettering is cut in the black background and stippled in transparent letters so that it flashes with the eyes. The frame is out of our 5 in. O. G. Mould, and the sign weighs about 35 pounds. It is fitted with a 16 c. p. electric light and a "Firefly Flasher". It is wired complete and the hangers are attached ready to put up and connect the wires. F. O. B. Factory, \$14.50. State voltage desired when ordering.

OMAHA OPTICAL COMPANY

ELECTRICAL FLASHER OPTICAL SIGNS

ELECTRIC FLASHER OPTICAL SIGN

This is a beautiful sign—very attractive and practical—has a round oval metal rim as illustrated. Hollow inside with heavy bent oval glass sides like a watch crystal. Natural colored eye and lettering as you desire on both sides. Two lights inside which flash on and off and illuminate the glass. Six lights on outside rim which burn steadily. Well painted and finished in 22K gold leaf.

No. 44.....26 inch sign, gold leaf finish.....\$50.00

No. 46.....32 inch sign, gold leaf finish..... 60.00
Can also be furnished in aluminum finish.

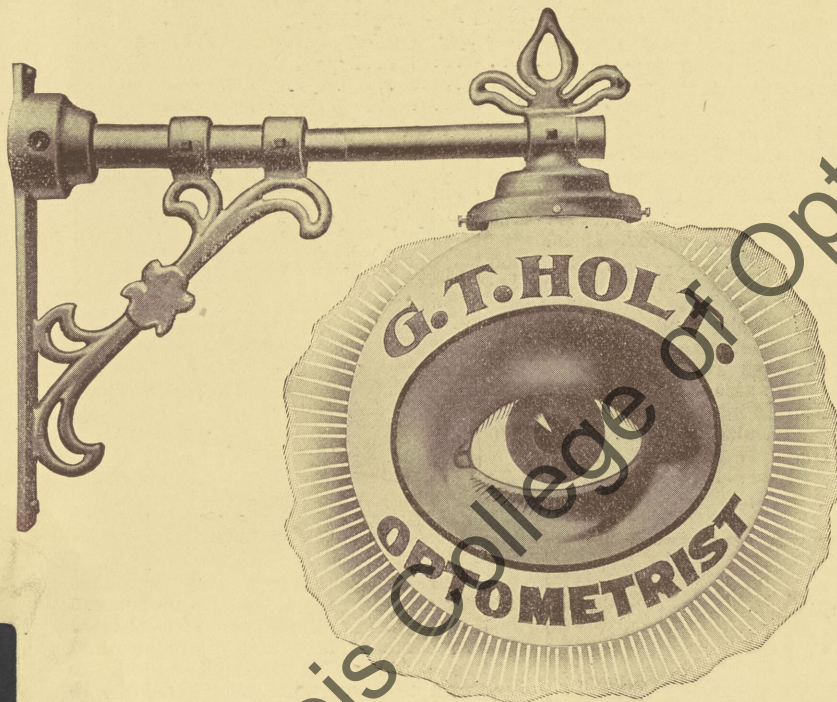

METAL OPTICAL SIGN

Here is a very practical moderate priced sign similar in appearance to No. 44, except without outside lights. Made with oval metal sides, has oval metal frame in gold or aluminum leaf (is not illuminated), sides are metal with hand painted eye on both sides. Will stand any climate. Is made in two sizes about eight inches thick at center. Has hollow oval metal rims, well finished.

No. 52.....26 inch sign, gold leaf finish.....\$25.00

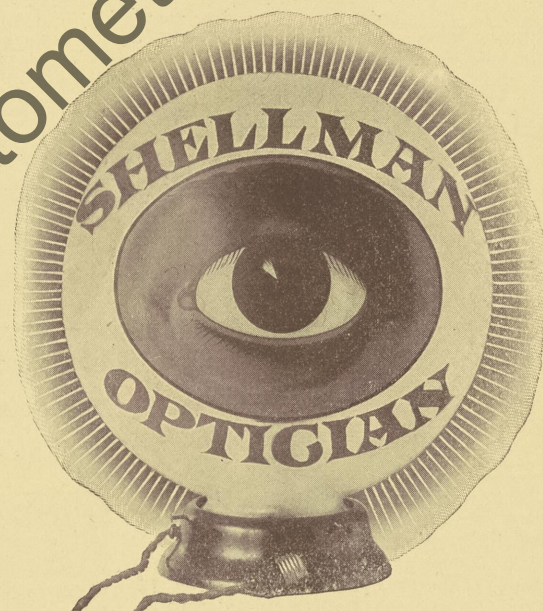

No. 54.....32 inch sign, gold leaf finish..... 35.00
Can also be furnished in aluminum finish.

ELECTRIC STREET SIGN

A modern attractive sign to place over door or window. Has a strong pipe bracket with a fine oval opal color glass globe 16 inches wide and about 5 inches thick, with one flashing light inside which illuminates globe. Readable day or night; hand painted eye and lettering on both sides as you desire.

No. 431.....16 inch sign complete.....\$20.00

ELECTRIC WINDOW SIGN

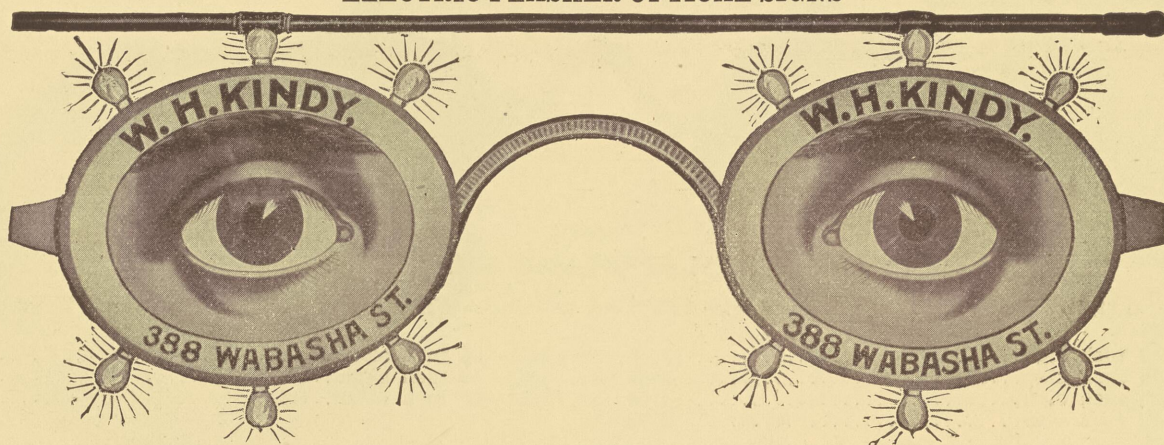

Very attractive and practical. Made of oval frosted glass, canteen shape, with black enamel letters and eye like cut. Fitted on wood base with 6 feet of cord for attaching. Has one light inside, which flashes on or off or burns steadily. Attractive day and night. New and attractive style, and very reasonable in price. We can put your name at top, or lettered as desired.

OMAHA OPTICAL COMPANY

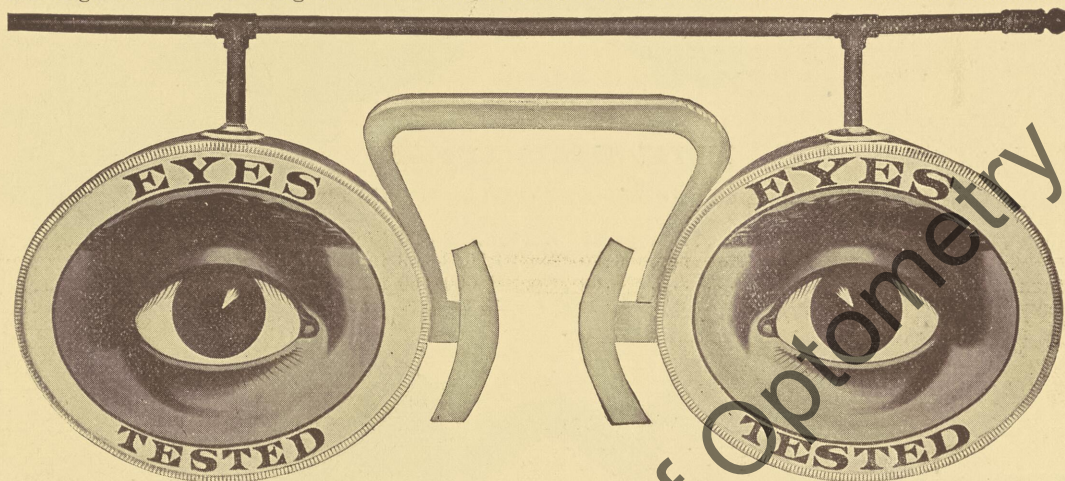

241

ELECTRIC FLASHER OPTICAL SIGNS

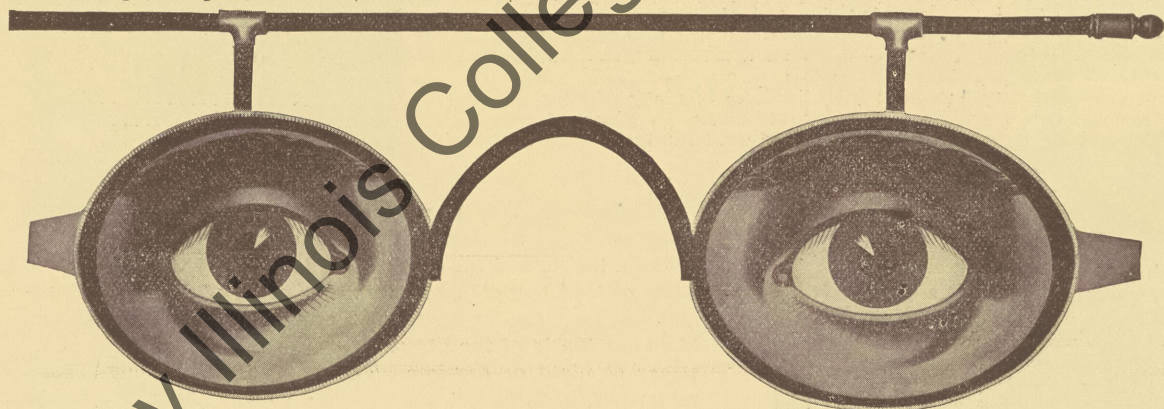

This is the most attractive sign on the market today. Can be seen at a long distance, and is the exact representation of a large Spectacle—just the thing for a Modern Optical Shop. As it is well made and finely finished, it will attract lots of attention, and can be read at a glance. The Frame is made of strong metal and covered with heavy zinc. The Sockets are all weather-proof, and wires are all connected inside. The entire Sign is thoroughly painted several times with our special prepared paint, so it will stand the weather. It has large natural color eyes on both sides, and can be lettered with your name on as you desire. It has 12 lights outside the frame which burn steady, while there is one flashing light behind each eye. This makes it more attractive, as the eyes flash while outside lights are steady. Sign furnished complete with rod and lamps ready to put up.

No. 375—Six foot Sign with lights as illustrated, complete with rod.....Each \$60.00
No. 360—Six foot Sign without the 12 lights on rims.....Each 45.00

This Electric Sign is patterned after a large eyeglass, has large oval shape eyes that are very natural in appearance and lettered like cut, or as you desire. Sign is double faced, and has one light between each eye. Frame is made of heavy, strong metal and covered with heavy zinc; made strong and durable so cannot be blown to pieces by the wind. Is thoroughly painted several times and trimmed in gold, so will stand the climate. The eyes and lettering are on the inside of glass so will be protected from weather. This is a very modern and attractive sign. All completely wired and ready to put up. Requires 2-16 c. p. lights which will flash on and off, or burn steady. Made so lights can be replaced when desired. Sign is 6 foot long and about 6 inches thick. Well proportioned and made first-class in every particular.

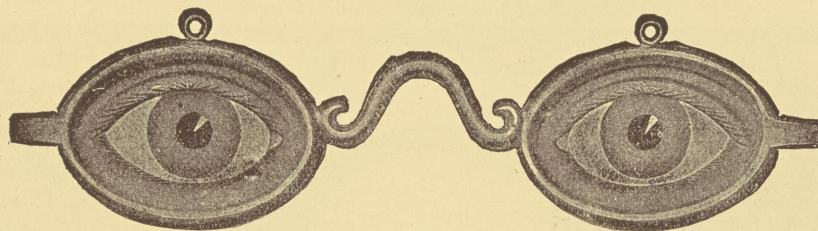

No. 371—Six foot Sign, complete with rod, like cut.....Each \$50.00

This is a Practical Modern Electric Sign, very attractive and can be seen at a distance, being 6 feet in length, and has large attractive Eyes, which are made on flat glass on both sides. Lettered as you desire. Has 1 16 c. p. light behind each Eye, which flashes on or off, or burns steady. Frame is made of heavy metal, covered with heavy zinc, so it will be strong and durable. The entire Sign is thoroughly painted several times with our special waterproof paint, and then trimmed in gold making it well appearing and durable. Sign is made so the lights can be easily removed. Is completely wired and finished with rod, like cut, ready to put up. Just the sign to attract attention to your store, and advertise your business.

No. 366—Six foot Spectacle Sign, like above, with rod.....\$45.00

Style A-1

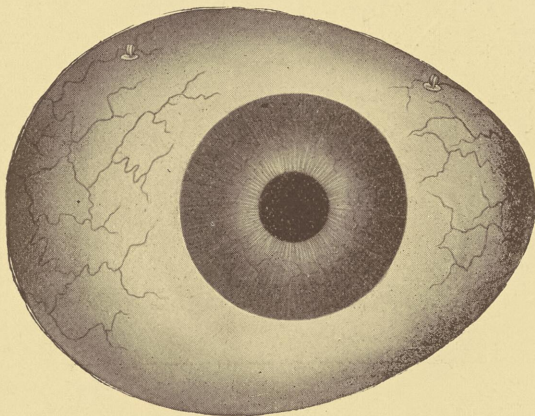

"IT WINKS"

Style A-1. This is an inexpensive sign and has been a great seller. It measures 24x28x6 inches over all. The glass is 16x20 inches and the eye is 13½x18 inches. It is painted two coats of lead and oil inside, and five coats of dead black outside to stand the weather. The eye is in natural colors and is on the inside of the glass. It makes a very beautiful effect either at night or daytime. The frame is out of our special pattern of O. G. Mould and the sign weighs about 30 pounds. It is fitted with a 16 c. p. electric light and a "Firefly" flasher. It is wired complete and shipped ready to hang and attach the wires. Both sides are alike and it can be seen up and down the street.

Price \$10.00 f. o. b. factory.

State voltage desired when ordering.

THE VICTOR POST CARD PROJECTOR

THE VICTOR STEREOPTICON

The Victor Post Card Projector, with an Arc Light is the perfect opaque projector. The Arc Light used in the Victor, is a marvel of simplicity and efficiency; it furnishes a powerful, pure white light, and a perfect reflected image. The Arc Light is steady, flickerless, noiseless and is attached to any electric light circuit of any voltage, direct or alternating current. The image is the largest, clearest and most brilliant ever produced by a post card projector. Color value and finest graduations of tone are all retained in the projected image, due to the white light of the arc. It uses photographs, post cards, newspaper and magazine clippings or other flat opaque objects, reflecting enlarged images on the wall or screen. The size of the image is practically unlimited. A picture ten feet long with the Victor is brilliant. At a distance of 15 feet from the screen, the size of the image will be $7\frac{1}{2}$ feet long. The Victor is small in size, measuring but 12 inches long and 9 inches high. Descriptive circular furnished upon request.

Price: Victor Post Card Projector with Arc Light and 12 Carbon points, net.....\$40.00

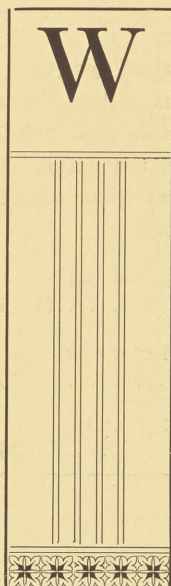

The Victor Stereopticon. The entire outfit, machine, arc lamp, rheostat, connections and 210 views weighs but $12\frac{1}{2}$ pounds. The old style outfit of equal capacity weighs at least 60 pounds. This machine is made ready in one minute; attach the plug to any electric light socket, touch the carbon points, center the light, insert a record. Everything is ready. By turning the crank, the views are changed instantly. Records can be changed in two seconds and the views are always right side up. No mistakes possible. The Victor Arc light used with this machine is the only noiseless arc light on the market. Guaranteed free from the common disagreeable humming. The size of the image produced by the Victor Stereopticon is practically unlimited. At 25 feet from the screen, it produces an image 7x8 feet. There are 15 pictures in each record. The Victor Stereopticon is adapted for use by schools, churches, lodges and the home. Descriptive circular furnished on request.

XXX SPECIAL

Concerning EVEREADY Flash Lights

WHILE THESE LIGHTS are styled Flash Lights, that designation would seem to be a misnomer inasmuch as they are designed to give a constant light for any length of time within the capacity of the battery. A light that simply flashed would, of course, be of little value. They are catalogued as Flash Lights because they are known to the trade as such.

By adopting these electric pocket and hand lights and thus dispensing with oil in the portable lamp, all danger of fire from this source is eliminated and a clean and safe light is provided for use around the house or elsewhere. The lights are absolutely fool-proof and may be placed in the hands of a child.

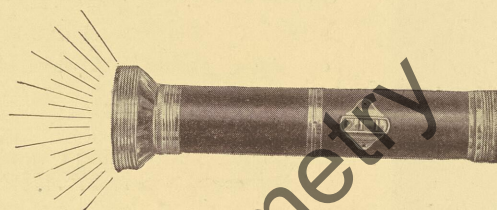

They may be brought in direct contact with the highest explosives without caution. There is nothing to explode and no fear of accident of any kind; no smoke and no odor. However hard it blows and storms they are always reliable.

These features have made the Eveready Flash Light popular and desirable wherever a Portable Light is required and the kerosene lamp and old style lantern have given way to them almost entirely, as they require no attention whatever.

They have been adopted by the Police throughout the world, by Gas, Oil and Powder Companies everywhere, the Army and Navy, Factories and Mills; tradesmen of practically every class use them to advantage, machinists, plumbers, miners, railroad conductors, engineers, trackmen, brakemen and switchmen; postmen and all who are out in the night on business or pleasure. Indispensable to travelers, automobilists, yachtsmen and campers.

No. 2604

No. 2616

Large lens and reflector.
Spreads and intensifies the light.

TUBULAR FLASH LIGHTS

Equipped with both flash and permanent contact. Their size and shape make them easy to handle and can be used around gasoline tanks or other inflammable material.

DAYNGLO—PATENTED

Daynglo is a specially prepared cloth which acts like magic; it is ideal for polishing and cleaning Opera and Field Glasses. It is sold with our recommendation,—is inexpensive yet effective.

For Polishing.—Rub with the Daynglo Cloth, using moderate pressure. Never wet or dampen the Daynglo Cloth, as it is not necessary and spoils it.

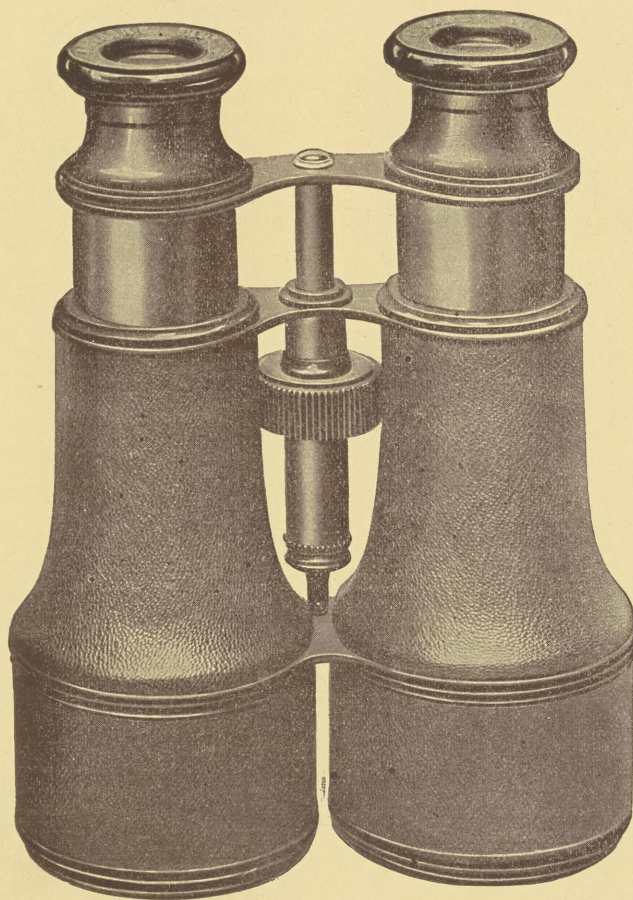

For Removing Tarnish, Finger Marks, etc.—Breathe or blow on the spot and immediately rub with slightly increased pressure. Repeat operation if necessary. After you have finished with the Daynglo Cloth, put it away where it cannot get dusty and gritty, which eliminates all possibility of scratching your silver.

The Daynglo Cloth is a practical household necessity and does not injure any surface. **Throw away your Silver Polishes.** They are no longer necessary for cleaning Gold or Silverware, or any polished surface. The

Daynglo Cloths, packed each one in a carton.....Per dozen \$4.00

THE DUPLEX

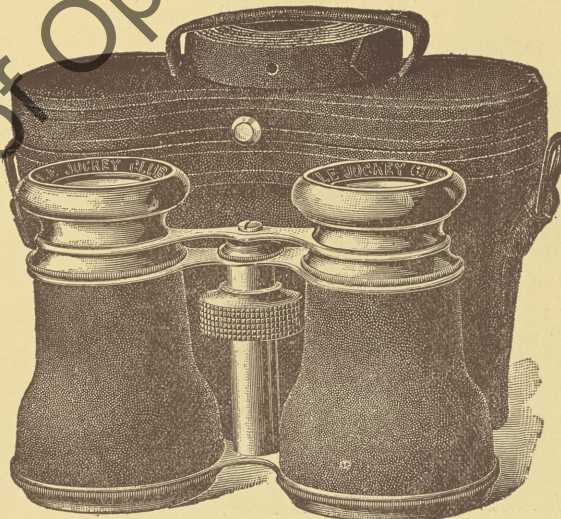

THE DUPLEX

Price Each

The Duplex Field Glass combining a high power and also a low power in the same glass. The change from high power to low power can be instantly made; within easy range of the fingers while holding the glass are two milled metal discs; these carry supplemental lenses, whereby the magnification of the $3\frac{1}{2}$ power becomes $5\frac{1}{2}$ power, thus the same glass is perfectly adapted to use by day or night, for marine or land, with a low or high magnification as desired. Its weight is 17 oz., diameter of objectives, 2 inches; height 4 inches; finish oxidized mountings, covered with best black Morocco or tan leather, as desired; sole leather carrying case and strap. This Field Glass is popular in size and price; a highly satisfactory one at a moderate cost.....\$20.00

ZEISS BINOCULAR

SHOWING FIELD OF ORDINARY
BINOCULAR OF SAME POWER

BAUSCH & LOMB ZEISS STEREO-BINOCULARS

- 6 Power 30 mm.** Linear magnification six times; objectives 30 mm. diameter; weight $24\frac{1}{2}$ oz., length $4\frac{1}{4}$ inches, width $5\frac{1}{2}$ inches. Especially desirable as a night glass, on cloudy days or in a fog. Equally good for use in day light. Complete with case, each, net\$90.00
- 8 Power 21 mm.** Linear magnification eight times; objectives 21 mm. diameter; weight $15\frac{1}{2}$ oz., length $4\frac{1}{8}$ inches, width 5 inches. A good Tourists' Glass, as it is the lightest and most compact of any Binocular, hence easy to carry. Complete with case, each, net 60.00
- 8 Power 25 mm.** Linear magnification eight times; objectives 25 mm. diameter; weight 21 oz., length $3\frac{1}{2}$ inches; width $5\frac{5}{8}$ inches. This glass is optically of a high order and suitable for all kinds of work. Its large objective gives a wide field and a great illumination. It is compact and light and a well balanced combination for all purposes. It is a general Field Glass of the highest order. Complete with case, each, net 75.00
- 12 Power 30 mm.** Linear magnification twelve times; objectives 30 mm. diameter; weight 25 oz., length $3\frac{3}{4}$ inches, width $5\frac{1}{2}$ inches. This glass possesses the highest magnifying power, which we thus far have considered practical to embody in a hand telescope. It is impossible to hold a glass of higher power steady enough in the hands to obtain a clear and well defined image. This glass is specially recommended as a Day Marine Glass, also for Military men, Sportsmen and Explorers. Complete with case, net105.00

- 1185..... This model has long been regarded as a satisfactory and serviceable instrument at very moderate cost. The size of the object lens is 3 inches in diameter. The body of the telescope, the sliding tube for eye-pieces, etc., are of polished brass. The instrument is also provided with sun-glass, and rack and pinion focusing adjustment, and is mounted on large hard-wood tripod. Three eye pieces are furnished—one terrestrial eye-piece magnifying 45 times, and two astronomical eye-pieces, one magnifying 50 times, one magnifying 114 times. Telescope tube and all eye-pieces included in neat wooden box. This instrument will show more than three hundred objects upon our moon's surface; the moon's so-called "seas," its mountain ranges, "craters," hills, and the mysterious "line of radiation" from the regions of the huge volcanic formations are visible to even the beginner. Length when closed, about 39 inches; extended, about 59 inches. Complete in case\$124.00

THE ALLISON TABLE No. 36

The Allison Table No. 36. Made of carefully selected material; the metal parts are mostly of steel and malleable iron accurately fitted. Every position needed in examination, treatment or operation may be instantly secured by means of foot levers, which upon being released, lock the table at any angle. The improved adjustable stirrup and leg crutches, are furnished with each table, and are indispensable features, enabling the operator to bring the patient to any desired position without discomfort and without the help of an assistant. The step is covered with corrugated rubber with metal border. The revolving cabinets, each equipped with removable aseptic trays of glass or porcelainized steel, can be opened by the operator when seated in front of the table. The instruments and dressings are thus brought directly to hand. The drawers open from either side. Its range of useful adjustments is limitless. This table, occupying no more space than the old-fashioned chair, combines a chair, a table and instrument cabinet.

Finish. Quartered Oak, finished in Golden, Old English or Weathered. Other oak finishes will be furnished on special order without extra charge. Imitation Mahogany, hard white enamel finish, or Black Walnut costs \$5.00 extra; genuine Mahogany \$15.00 extra. All the interiors are finished in hard, white enamel.

Trimmings. Oxidized Copper, unless otherwise specified, nickel if desired. Brass trimmings furnished for \$5.00 extra.

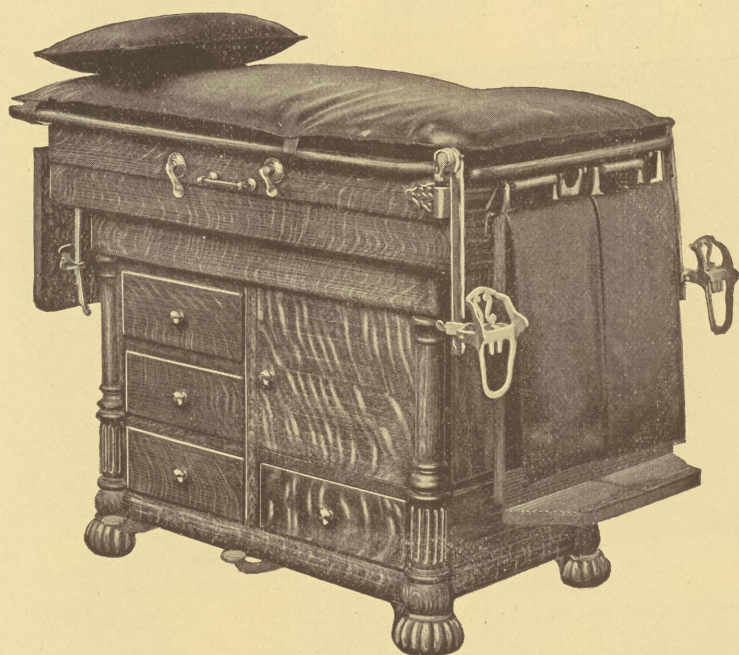

Dimensions. Normal position, 40 inches long, 32 inches high, 22 inches wide. Fully extended, 74 inches long.

OMAHA OPTICAL COMPANY

THE ALLISON TABLE No. 133

The Allison Table No. 133, in dimensions, finish and automatic construction, is identical with Style 36. It is capable of the same adjustments except that the leg rest is not detachable. It has heavy base rails, turned corner columns, and anti-friction castors concealed by metal feet.

Trimmings: Oxidized copper unless otherwise specified. The interior of drawers and cabinets are supplied with glass and porcelain trays, are finished in white enamel. The adjustable arm-rest, stirrups and leg-crutches are included with each table.

Stock Number	Price Each
133A.....Allison Table No. 133, no upholstery, polished top	\$75.00
133B.....Allison Table No. 133, top upholstered in leather, loose pillow	85.00

133D.....Allison Table No. 133, leather cushion and pillow, leg rest pads, glass bottoms in all drawers	95.00

THE METROPOLITAN TABLE

An excellent table at a low price, on which may be secured the important positions required in general practice. It has adjustable and detachable leg rests, is equipped with Allison adjustable stirrups, and is mounted on heavy, anti-friction casters, concealed with metal lion-claw feet. Revolving cabinets, swinging out from either side, each supplied with removable glass trays, offer great convenience as receptacles for instruments, cotton, bandages, etc. The material is oak; trimmings Japanned, with copper plated stirrups and sockets. Dimensions: Normal position, 40 inches long; 32 inches high; 22 inches wide; fully extended 74 inches long.

ALLISON TABLE No. 128

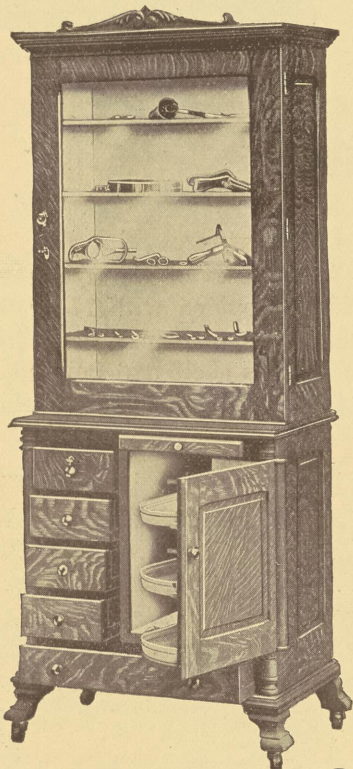

ALLISON TABLE No. 128

The fact that this is a low priced table does not indicate that it is an inferior article in any way.

The material is as carefully prepared and the construction as substantial as that of the more expensive tables. The leg rest, table top and drop leaf are adjustable to different angles. Japanned trimmings with adjustable oxidized copper stirrups, solid square legs on anti-friction casters, complete a useful moderate priced table.

Stock Number	Price Each
128A.....No upholstery	\$22.50
128IB.....Top upholstered in imitation leather with pillow	30.00
128IC.....Finished top imitation leather cushion and pillow	30.00
128LB.....Top upholstered in genuine leather with pillow	35.00
128LC.....Finished top with genuine leather cushion and pillow	35.00

ALLISON SPECIALISTS CABINETS

EYE, EAR, NOSE, AND THROAT

Cabinet No. 69 is designed to fill the requirements of the specialist in diseases of the eye, ear, nose and throat. Made of carefully selected materials with the finest finish known. Provided with 17 drawers of different sizes, each partitioned to accommodate regular and special instruments, and compartments for clean and soiled linen, with proper ventilation. The clean linen compartment has a glass shelf and beveled plate glass door. The interior of drawer and clean linen compartment are finished in hard white enamel, and if preferred glass bottoms can be provided, making them thoroughly aseptic.

Note:—White opalite glass on top of lower section, furnished instead of plate glass without extra charge. All Cabinets are furnished with fenders for bottles. Sold on installments if desired.

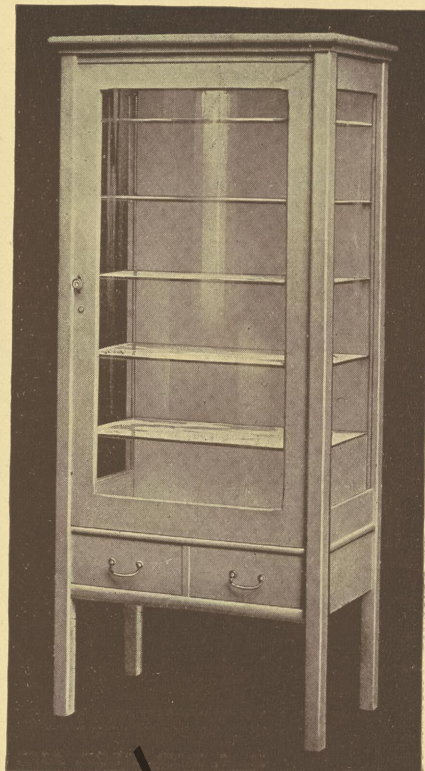

ALLISON WHITE ENAMELED CABINET

This style of Cabinet, constructed upon simple lines, seems destined to become one of the most popular designs.

Substantially constructed of wood and finished in five coats of hard white enamel both inside and out, the exterior hand rubbed and polished, it presents a case, which for simplicity, durability and cleanliness cannot be equalled for the price.

The trimmings are few and in keeping with the general design, being heavily plated nickel. Furnished also in any of the oak finishes with copper trimmings. Dimensions: Depth, 18 inches; width, 30 inches, and height, 67 inches.

Stock Number	Price Each
55..Cabinet complete with D. S. door and sides, 5 plate shelves	\$50.00
Plain plate door and sides instead of D. S. extra.....	10.00

THE ALLISON SPECIALISTS CHAIR

No. 7A

Physicians giving particular attention to eye, ear, nose and throat affections have long sought an adjustable chair especially adapted to their requirements. They will welcome Style No. 7. The back is adjustable up and down; there is a range of nine inches in adjustment so that patients of all sizes may be accommodated. The seat revolves independently of the back, and as there are no arm-posts the patient may be turned to one side or the other, permitting treatment of either ear with greatest ease. A hand lever to the right, back of the seat, enables the operator to recline the back and secure any angle desired. By means of a foot lever, the entire chair may be tipped backwards. The two sections of the head-rest are adjustable. The stop, which is covered with corrugated rubber may be folded against the frame, permitting the patients feet to rest upon the floor. Height of seat from floor, 18 to 26 inches. The base is finished in black enamel, handsomely ornamented. Anti friction casters. Trimmings oxidized copper.

No. 7B

Stock Number	Each Price
7A..Chair, wood seat and back (cherry or quartered oak).....	\$45.00
